Based on this, I think he meant to approve it in webforms...

Subject: RATE Exposure modules - clearance

Hi Eva,

Great job!

I've gone through all the modules (EXA401-410) and have the following comments. I'm clearing the set of EXA401-407, but not yet the others per the comments below; rather than sending the whole set back or holding it in webforms I'd prefer to go ahead with the first set since they're in very good shape. Please submit EXA407-410 through a separate Clearance process with tech review forms as indicated below.

Again, these modules will be very useful and the RATE team has done a great job creating these.

Please let me know if you have any questions.

John

In Webforms:

Approval is for modules EXA 401-407 and not yet for EXA408, EXA 409 and EXA410. EXA401-407 are all very well done and informative and I have no comments or suggestions for revisions.

EXA 408 needs technical review by Ellen Kirrane regarding the Pb levels shown as level of concern on slide 42 and page 17 of the support document where the level of > 10ug/dL from ATSDR seems out of date.

EXA 409 regarding Pb as a case study needs technical review by Ellen Kirrane.

EXA 410 regarding dioxin as a case study needs technical review by NCEA-Cin (ask Annette Gatchett who would be the appropriate reviewer).
