

2014

Fourth National Report on Human Exposure to Environmental Chemicals  
*Updated Tables, August, 2014*

**U.S. Department of  
Health and Human Services**  
Centers for Disease  
Control and Prevention

# Table of Contents

## General Information

---

Introduction	1
What's New and Different?	3

## Tobacco Smoke

---

Cotinine	4
NNAL	6

## Disinfection By-Products

---

Bromodichloromethane	8
Dibromochloromethane	9
Tribromomethane (Bromoform)	10
Trichloromethane (Chloroform)	11

## Environmental Phenols

---

Benzophenone-3	12
Bisphenol A	14
4- <i>tert</i> -Octylphenol	16
Triclosan	18

## Fungicides and Metabolites

---

ortho-Phenylphenol	20
Ethylene thiourea	24
Pentachlorophenol	26
Propylene thiourea	28

## Herbicides and Metabolites

---

2,4-Dichlorophenoxyacetic acid	30
2,4,5-Trichlorophenoxyacetic acid	32

## Sulfonyl Urea Herbicides

---

Urinary Bensulfuron-methyl	34
Urinary Chlorsulfuron	36
Urinary Ethametsulfuron-methyl	38
Urinary Foramsulfuron	40
Urinary Halosulfuron	42
Urinary Mesosulfuron-methyl	44
Urinary Metsulfuron-methyl	46
Urinary Nicosulfuron	48
Urinary Oxasulfuron	50
Urinary Primisulfuron-methyl	52
Urinary Prosulfuron	54
Urinary Rimsulfuron	56
Urinary Sulfometuron-methyl	58
Urinary Sulfosulfuron	60
Urinary Thifensulfuron-methyl	62
Urinary Triasulfuron	64
Urinary Triflusulfuron-methyl	66

**Carbamate Pesticide Metabolites**

Carbofuranphenol	68
2-Isopropoxyphenol	70

**Organochlorine Pesticides and Metabolites**

Aldrin	72
Dieldrin	74
Endrin	76
Heptachlor epoxide	78
<i>o,p'</i> -DDT	80
2,4,5-Trichlorophenol	82
2,4,6-Trichlorophenol	84

**Other Pesticide Metabolites**

2,4-Dichlorophenol	86
2,5-Dichlorophenol	88

**Organophosphorus Insecticides: Specific Metabolites**

Acephate	90
Dimethoate	92
Methamidophos	94
Omethoate	96
Malathion dicarboxylic acid	98
2-Isopropyl-4-methyl-6-hydroxypyrimidine	100
<i>para</i> -Nitrophenol	102
3,5,6-Trichloro-2-pyridinol	104

**Organophosphorus Insecticides: Dialkyl Phosphate Metabolites**

Diethylphosphate (DEP)	106
Dimethylphosphate (DMP)	110
Diethylthiophosphate (DETP)	114
Dimethylthiophosphate (DMTP)	118
Diethyldithiophosphate (DEDTP)	122
Dimethyldithiophosphate (DMDTP)	126

**Pyrethroid Metabolites**

<i>trans</i> -3-(2,2-Dichlorovinyl)-2,2-dimethylcyclopropane carboxylic acid	130
<i>cis</i> -3-(2,2-Dibromovinyl)-2,2-dimethylcyclopropane carboxylic acid	132
4-Fluoro-3-phenoxy-benzoic acid	134
3-Phenoxybenzoic acid	136

**Metals and Metalloids**

Antimony	138
Arsenic, Total	142
Arsenic (V) acid	144
Arsenobetaine	146
Arsenocholine	148
Arsenous (III) acid	150
Dimethylarsinic acid	152
Monomethylarsonic acid	154

Trimethylarsine oxide	156
Barium	158
Beryllium	162
Cadmium	166
Cesium	173
Cobalt	177
Lead	181
Manganese	188
Mercury (total; inorganic; ethyl and methyl species)	189
Molybdenum	195
Platinum	199
Selenium	203
Thallium	204
Tungsten	208
Uranium	212
<b>Parabens</b>	
Butyl paraben	216
Ethyl paraben	218
Methyl paraben	220
<i>n</i> -Propyl paraben	222
<b>Perchlorate and Other Anions</b>	
Nitrate	224
Perchlorate	226
Thiocyanate	228
<b>Perfluorinated Compounds: Surfactants</b>	
Perfluorobutane sulfonic acid (PFBuS)	230
Perfluorodecanoic acid (PFDeA)	231
Perfluorododecanoic acid (PFDoA)	232
Perfluoroheptanoic acid (PFHpA)	233
Perfluorohexane sulfonic acid (PFHxS)	234
Perfluorononanoic acid (PFNA)	235
Perfluorooctanoic acid (PFOA)	236
Perfluorooctane sulfonic acid (PFOS)	237
Perfluorooctane sulfonamide (PFOSA)	238
2-( <i>N</i> -Ethyl-perfluorooctane sulfonamido) acetic acid (Et-PFOSA-AcOH)	239
2-( <i>N</i> -Methyl-perfluorooctane sulfonamido) acetic acid (Me-PFOSA-AcOH)	240
Perfluoroundecanoic acid (PFUA)	241
<b>Phthalate and Phthalate Alternative Metabolites</b>	
Mono-benzyl phthalate (MBzP)	242
Mono-isobutyl phthalate (MiBP)	246
Mono- <i>n</i> -butyl phthalate (MnBP)	248
Mono-cyclohexyl phthalate (MCHP)	252
Mono-ethyl phthalate (MEP)	256
Mono-2-ethylhexyl phthalate (MEHP)	260

Mono-(2-ethyl-5-hydroxyhexyl) phthalate (MEHHP)	264
Mono-(2-ethyl-5-oxohexyl) phthalate (MEOHP)	268
Mono-(2-ethyl-5-carboxypentyl) phthalate (MECPP)	272
Mono-(carboxynonyl) phthalate (MCNP)	274
Mono-isononyl phthalate (MiNP)	276
Mono-(carboxyoctyl) phthalate (MCOP)	280
Mono-methyl phthalate (MMP)	282
Mono-(3-carboxypropyl) phthalate (MCP)	286
Mono- <i>n</i> -octyl phthalate (MOP)	290

#### **Phytoestrogens and Metabolites**

Daidzein	294
Enterodiol	298
Enterolactone	302
Equol	306
Genistein	310
O-Desmethylangolensin	314

#### **Polycyclic Aromatic Hydrocarbon Metabolites**

2-Hydroxyfluorene	318
3-Hydroxyfluorene	320
9-Hydroxyfluorene	322
1-Hydroxyphenanthrene	324
2-Hydroxyphenanthrene	326
3-Hydroxyphenanthrene	328
4-Hydroxyphenanthrene	330
1-Hydroxypyrene	332
1-Hydroxynaphthalene (1-Naphthol)	334
2-Hydroxynaphthalene (2-Naphthol)	336

#### **Volatile Organic Compounds (VOCs)**

1,1,1-Trichloroethane (Methyl chloroform)	338
1,1,2,2-Tetrachloroethane	339
1,1,2-Trichloroethane	340
1,1-Dichloroethane	341
1,1-Dichloroethene (Vinylidene chloride)	342
1,2-Dibromo-3-chloropropane (DBCP)	343
1,2-Dichlorobenzene ( <i>o</i> -Dichlorobenzene)	344
1,2-Dichloroethane (Ethylene dichloride)	345
<i>cis</i> -1,2-Dichloroethene	346
<i>trans</i> -1,2-Dichloroethene	347
1,2-Dichloropropane	348
1,3-Dichlorobenzene ( <i>m</i> -Dichlorobenzene)	349
1,4-Dichlorobenzene (Paradichlorobenzene)	350
2,5-Dimethylfuran	351
Benzene	352
Chlorobenzene (Monochlorobenzene)	353

Dibromomethane	354
Dichloromethane (Methylene chloride)	355
Ethylbenzene	356
Hexachloroethane	357
Methyl- <i>tert</i> -butyl ether (MTBE)	358
Nitrobenzene	359
Styrene	360
Tetrachloroethene (Perchloroethylene)	361
Tetrachloromethane (Carbon tetrachloride)	362
Toluene	363
Trichloroethene (Trichloroethylene)	364
<i>m-p</i> -Xylene	365
<i>o</i> -Xylene	366
<b>Adult Cigarette Smokers and Nonsmokers</b>	
Adult Cigarette Smokers and Nonsmokers: Analysis of Select Chemicals in a Special Sample	367
<b>Metals and Metalloids (Special Sample: Adult Smokers and Nonsmokers)</b>	
Antimony	368
Arsenic, Total	370
Arsenic (V) acid	372
Arsenobetaine	374
Arsenocholine	376
Arsenous (III) acid	378
Dimethylarsinic acid	380
Monomethylarsonic acid	382
Trimethylarsine oxide	384
Barium	386
Cadmium	388
Cesium	390
Cobalt	392
Lead	394
Manganese	396
Molybdenum	398
Strontium	400
Thallium	402
Tin	404
Tungsten	406
Uranium	408
<b>Perchlorate and Other Anions (Special Sample: Adult Smokers and Nonsmokers)</b>	
Nitrate	410
Perchlorate	412
Thiocyanate	414
<b>Polycyclic Aromatic Hydrocarbon Metabolites (Adult Cigarette Smokers and Nonsmokers: Special Sample)</b>	
2-Hydroxyfluorene	416
3-Hydroxyfluorene	418

9-Hydroxyfluorene	420
1-Hydroxyphenanthrene	422
2-Hydroxyphenanthrene	424
3-Hydroxyphenanthrene	426
4-Hydroxyphenanthrene	428
1-Hydroxypyrene	430
1-Hydroxynaphthalene (1-Naphthol)	432
2-Hydroxynaphthalene (2-Naphthol)	434
<b>Volatile Organic Compound (VOC) Metabolites (Special Sample: Adult Smokers and Nonsmokers)</b>	
N-Acetyl-S-(benzyl)-L-cysteine	436
N-Acetyl-S-(2-carbamoyl-2-hydroxyethyl)-L-cysteine	438
N-Acetyl-S-(2-carbamoylethyl)-L-cysteine	440
N-Acetyl-S-(2-carboxyethyl)-L-cysteine	442
N-Acetyl-S-(3-hydroxypropyl)-L-cysteine	444
N-Acetyl-S-(2-cyanoethyl)-L-cysteine	446
N-Acetyl-S-(1,2-dichlorovinyl)-L-cysteine	448
N-Acetyl-S-(2,2-dichlorovinyl)-L-cysteine	450
N-Acetyl-S-(dimethylphenyl)-L-cysteine	452
N-Acetyl-S-(N-methylcarbamoyl)-L-cysteine	454
N-Acetyl-S-(3,4-dihydroxybutyl)-L-cysteine	456
N-Acetyl-S-(2-hydroxy-3-butenyl)-L-cysteine	458
N-Acetyl-S-(4-hydroxy-2-butenyl)-L-cysteine	460
N-Acetyl-S-(1-hydroxymethyl-2-propenyl)-L-cysteine	462
N-Acetyl-S-(2-hydroxyethyl)-L-cysteine	464
N-Acetyl-S-(2-hydroxypropyl)-L-cysteine	466
N-Acetyl-S-(3-hydroxypropyl-1-methyl)-L-cysteine	468
N-Acetyl-S-(phenyl)-L-cysteine	470
<i>t,t</i> -Muconic acid	472
N-Acetyl-S-(phenyl-2-hydroxyethyl)-L-cysteine	474
N-Acetyl-S-(n-propyl)-L-cysteine	476
N-Acetyl-S-(trichlorovinyl)-L-cysteine	478
2-Aminothiazoline-4-carboxylic acid	480
Mandelic acid	482
2-Methylhippuric acid	484
3- and 4-Methylhippuric acid	486
Phenylglyoxylic acid	488
2-Thioxothiazolidine-4-carboxylic acid	490
<b>Special Analysis</b>	
Special Analysis of Pooled Samples for Select Chemicals	492

Appendix D	499

## ***Fourth National Report on Human Exposure to Environmental Chemicals, Updated Tables, August 2014***

The *Fourth National Report on Human Exposure to Environmental Chemicals, Updated Tables, August 2014* provides nationally representative biomonitoring data that has become available since the publication of the *Fourth National Report on Human Exposure to Environmental Chemicals, 2009*. The *Updated Tables, August 2014* is being released soon after the *Updated Tables, July 2014* because of errors in NHANES sampling weights that have recently been discovered by the National Center for Health Statistics (NCHS) in selected data files for NHANES 2011-2012 (see Important Notice below).

Compared to the *Updated Tables, September 2013*, the *Updated Tables, August 2014* present data for 35 new chemicals and updated data for 16 chemicals. Since publication of the *Fourth Report, 2009*, the *Updated Tables, August 2014* has updated tables for 129 chemicals and new tables for 70 chemicals.

Over time, some of the chemicals and the samples in which they have been measured have changed. In this release of the *Updated Tables*, a number of chemicals were measured in a Special Sample of the U.S. population, namely, adult cigarette smokers and nonsmokers. These data tables are presented together ([Adult Cigarette Smokers and Nonsmokers: Analysis of Select Chemicals in a Special Sample](#)). A link to a Biomonitoring Summary, information about a specific chemical or chemical group, is provided at the bottom of many of the data tables. For many chemicals, there is also a link to a brief overview about the chemical or chemical group, referred to as a Fact Sheet. Two appendices are updated to include information pertinent to these chemicals, as well as the other chemicals included in the *Updated Tables* ([Appendix C. References for Biomonitoring Methods](#); [Appendix D. Limit of Detection Table](#)).

The chemicals included in this *Updated Tables* are posted on the *Report* website: Chemicals in the *Fourth Report: Updated Tables, August 2014*.

The *Report* website also is the best resource for the most recent updates of available data (<http://www.cdc.gov/exposurereport>). The website also contains details of the Data Sources and Data Analysis, Interpretation of *Report* Data, and Chemical and Toxicological Information that pertain to the *Updated Tables*.

### **Important Notice Regarding the Updated Tables, July 2014**

The *Updated Tables, July 2014*, were withdrawn August 8, 2014 after NHANES discovered and alerted us to an error in sampling weights in selected data files for NHANES 2011-2012.

The chemicals affected by the NHANES 2011-2012 sampling weight error include the following:

- Environmental Phenols: Benzophenone-3, Bisphenol A, Triclosan
- Other Pesticide Metabolites
- Metals and Metalloids (urine and serum results only; whole blood results are not

affected)

- Parabens
- Perchlorate and Other Anions
- Perfluorinated Compounds: Surfactants
- Phthalate Metabolites
- Polycyclic Aromatic Hydrocarbon Metabolites
- Volatile Organic Compound (VOC) Metabolites

This *Updated Tables, August 2014*, includes NHANES 2011-2012 data **not affected** by the sampling weight error. When the NHANES 2011-2012 corrected files are available, we will recalculate our summary data and add appropriate tables to a future release of *Updated Tables*.

In addition, a second NHANES issue involving sample weights caused us to withdraw data tables on July 18 for the chemicals measured in **pooled samples** for NHANES 2005-2006 and 2007-2008. When corrected data files are available from NHANES for the NHANES 2005-2006 and 2007-2008 pooled samples, we will provide them in a future *Updated Tables*.

For additional details regarding the pooled samples, see the section [Special Analysis of Pooled Samples for Select Chemicals](#).

## What's New and Different?

The *Updated Tables* in this release include chemicals that have results available from the NHANES survey periods 2007-2008 or 2011-2012. New chemicals measured for the first time include ethyl mercury, methyl mercury, selenium, and manganese in whole blood. Urinary metabolites of several volatile organic compounds and urine manganese, strontium, and tin were measured in a special sample of adult smokers and nonsmokers.

Chemicals with updated data in this release are serum cotinine; urinary NNAL; metals in whole blood; and urinary metabolites of pyrethroids, herbicides, and specific organophosphorus pesticides.

Results for several chemicals will not be reported after NHANES 2009-2010 because their concentrations have been largely undetectable in previous survey periods. These chemicals are urinary beryllium and platinum; urinary 4-*tert*-octylphenol; urinary *o*-phenylphenol; the urinary organochlorine pesticide metabolites 2,4,5-trichlorophenol and 2,4,6-trichlorophenol; and the urinary phthalate metabolites, mono-cyclohexyl phthalate and mono-*n*-octyl phthalate. The phytoestrogen group of chemicals is not reported after NHANES 2009-2010 because the largely dietary sources remain unchanged, and urine concentrations of the phytoestrogens and metabolites have been relatively stable from 1999-2010.

Previously released data tables for several urinary pesticides and metabolites did not include results for ages 60 years and older in the NHANES 2001-2002 results. These results are included in the current *Updated Tables*. Therefore, sample sizes are larger and geometric means and percentile estimates are slightly different for several of the 2001-2002 categories in these data tables compared with previous tables. The 11 affected chemicals are four pyrethroid metabolites, three specific organophosphorus metabolites, 2,4-dichlorophenoxyacetic acid, 2,4,5-trichlorophenoxyacetic acid, and two carbamate metabolites.

### **Adult Cigarette Smokers and Nonsmokers: Analysis of Selected Chemicals in a Special Sample**

Beginning with the NHANES 2011-2012 survey period, a special sample of adults (age 20 years and older) was used to measure select chemical groups that are associated with tobacco smoke exposure. This special sample includes adults who reported that they currently smoke cigarettes. Results for these chemicals are provided in the section, [Adult Cigarette Smokers and Nonsmokers: Analysis of Select Chemicals in a Special Sample](#). The chemicals included in this section are urinary metals and arsenic species; urinary perchlorate, nitrate, and thiocyanate; urinary metabolites of several polycyclic aromatic hydrocarbons (PAHs); and urinary metabolites of several volatile organic compounds. Future *Updated Tables* will present additional data for the special sample as results become available.

For the information in this section, "What's New and Different," contained in previous releases of *Updated Tables*, please see the Archives from *Updated Tables* at:

<http://www.cdc.gov/exposurereport/>.

## Serum Cotinine

Metabolite of nicotine (component of tobacco smoke)

Geometric mean and selected percentiles of serum concentrations (in ng/mL) for the \*\*\*non-smoking U.S. population from the National Health and Nutrition Examination Survey.

	Survey years	Geometric mean	Selected percentiles				Sample size
		(95% conf. interval)	(95% confidence interval)				
			50th	75th	90th	95th

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, 03-04, 05-06, 07-08, 09-10, and 11-12 are 0.05, 0.05, 0.015, 0.015, 0.015, 0.015, and 0.015 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

\*\* In the 2001-2002 survey period, 83% of measurements had an LOD of 0.015 ng/mL, and 17% had an LOD of 0.05 ng/mL.

\*\*\*Non-smoking is defined as a serum cotinine concentration of 10 ng/mL or less.

**Biomonitoring Summary:** [http://www.cdc.gov/biomonitoring/Cotinine\\_BiomonitoringSummary.html](http://www.cdc.gov/biomonitoring/Cotinine_BiomonitoringSummary.html)

< LOD means less than the limit of detection for the urine levels not corrected for creatinine.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

\*\*Non-smoking is defined as a serum cotinine concentration of 10 ng/mL or less.

Limit of detection (LOD, see Data Analysis section) for Survey years 01-02, 03-04, and 05-06 are 0.596, 1.5, and 1.0 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

	09-10	*	< LOD	< LOD	.200 (<LOD-.300)	.300 (.300-.400)	1206

Limit of detection (LOD, see Data Analysis section) for Survey years 05-06, 07-08, and 09-10 are 0.2, 0.2, and 0.2 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated; proportion of results below limit of detection was too high to provide a valid result.

+The 2003-2004 data were removed due to potential for contamination that may have occurred during sampling. Not measured after Survey years 2009-2010.

	05-06	*	< LOD	< LOD	.300 (.200-.400)	.500 (.400-.800)	1278
	07-08	*	< LOD	< LOD	.100 (<LOD-.200)	.300 (.200-.500)	1310
	09-10	*	< LOD	< LOD	.300 (.300-.400)	.500 (.400-.500)	1350

Limit of detection (LOD, see Data Analysis section) for Survey years 03-04, 05-06, 07-08, and 09-10 are 0.1, 0.1, 0.1, and 0.2 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

+Not measured after Survey years 2009-2010.

Non-Hispanic whites	03-04	*	< LOD	< LOD	< LOD	< LOD	1062
	05-06	*	< LOD	< LOD	< LOD	< LOD	1006

Limit of detection (LOD, see Data Analysis section) for Survey years 03-04 and 05-06 are 0.1 and 0.37 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

	07-08	*	< LOD	< LOD	< LOD	< LOD	1084

< LOD means less than the limit of detection for the urine levels not corrected for creatinine.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

+Not measured in Survey years 2005-2006.

**Biomonitoring Summary:** [http://www.cdc.gov/biomonitoring/2,4,5-TrichlorophenoxyaceticAcid\\_BiomonitoringSummary.html](http://www.cdc.gov/biomonitoring/2,4,5-TrichlorophenoxyaceticAcid_BiomonitoringSummary.html)

## Urinary Bensulfuron-methyl

Geometric mean and selected percentiles of urine concentrations (in µg/L) for the U.S. population from the National Health and Nutrition Examination Survey.

	05-06	*	< LOD	< LOD	< LOD	< LOD	711
	07-08	*	< LOD	< LOD	< LOD	< LOD	523
Non-Hispanic whites	03-04	*	< LOD	< LOD	< LOD	< LOD	935
	05-06	*	< LOD	< LOD	< LOD	< LOD	990
	07-08	*	< LOD	< LOD	< LOD	< LOD	1004

Limit of detection (LOD, see Data Analysis section) for Survey years 03-04, 05-06, and 07-08 are 0.05, 0.05, and 0.05 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

	05-06	*	< LOD	< LOD	< LOD	< LOD	993
	07-08	*	< LOD	< LOD	< LOD	< LOD	1007

Limit of detection (LOD, see Data Analysis section) for Survey years 03-04, 05-06, and 07-08 are 0.1, 0.1, and 0.1 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, and 03-04 are 20.7, 17.4, and 7.8, respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Limit of detection (LOD, see Data Analysis section) for Survey years 03-04, 05-06, 07-08 and 09-10 are 0.5, 0.5, 0.5, and 0.5 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

+Not measured after Survey years 2009-2010.

## Urinary Acephate

Geometric mean and selected percentiles of urine concentrations (in µg/L) for the U.S. population from the National Health and Nutrition Examination Survey.

	Survey years	Geometric mean (95% conf. interval)	Selected percentiles (95% confidence interval)				Sample size
			50th	75th	90th	95th	
Total	03-04	*	< LOD	< LOD	< LOD	< LOD	2491
	05-06	*	< LOD	< LOD	< LOD	< LOD	2546
<b>Age group</b>							
6-11 years	03-04	*	< LOD	< LOD	< LOD	< LOD	309
	05-06	*	< LOD	< LOD	< LOD	< LOD	343
12-19 years	03-04	*	< LOD	< LOD	< LOD	< LOD	715
	05-06	*	< LOD	< LOD	< LOD	< LOD	696
20 years and older	03-04	*	< LOD	< LOD	< LOD	< LOD	1467
	05-06	*	< LOD	< LOD	< LOD	< LOD	1507
<b>Gender</b>							
Males	03-04	*	< LOD	< LOD	< LOD	< LOD	1221
	05-06	*	< LOD	< LOD	< LOD	< LOD	1205
Females	03-04	*	< LOD	< LOD	< LOD	< LOD	1270
	05-06	*	< LOD	< LOD	< LOD	< LOD	1341
<b>Race/ethnicity</b>							
Mexican Americans	03-04	*	< LOD	< LOD	< LOD	< LOD	608
	05-06	*	< LOD	< LOD	< LOD	< LOD	666
Non-Hispanic blacks	03-04	*	< LOD	< LOD	< LOD	< LOD	647
	05-06	*	< LOD	< LOD	< LOD	< LOD	698
Non-Hispanic whites	03-04	*	< LOD	< LOD	< LOD	< LOD	1077
	05-06	*	< LOD	< LOD	< LOD	< LOD	979

Limit of detection (LOD, see Data Analysis section) for Survey years 03-04 and 05-06 are 0.1 and 0.25 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Non-Hispanic whites	99-00	*	< LOD	< LOD	2.10 (<LOD-6.33)	4.20 (2.10-11.0)	603
	01-02	*	< LOD	1.29 (1.14-1.42)	2.70 (2.38-3.10)	3.71 (3.38-4.00)	1259
	07-08	.623 (.531-.730)	.690 (.610-.790)	1.36 (1.19-1.59)	2.51 (1.89-3.08)	3.63 (2.82-5.48)	1075

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, and 07-08 are 0.8, 0.1, and 0.1 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

## Urinary *para*-Nitrophenol (creatinine corrected)

Metabolite of Ethyl Parathion, Methyl Parathion, and Nitrobenzene

Geometric mean and selected percentiles of urine concentrations (in µg/g of creatinine) for the U.S. population from the National Health and Nutrition Examination Survey.

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, 03-04, 05-06, and 07-08 are 0.18, 0.4, 0.5, 0.55, and 0.55 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, 03-04, 05-06, and 07-08 are 0.05, 0.1, 0.1, 0.39, and 0.39 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, 03-04, 05-06, 07-08, and 09-10 are 0.04, 0.04, 0.07, 0.032, 0.032, and 0.032 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

	07-08	*	< LOD	< LOD	< LOD	< LOD	1063
	09-10	*	< LOD	< LOD	< LOD	< LOD	1210

Limit of detection (LOD, see Data Analysis section) for Survey years 03-04, 05-06, 07-08 and 09-10 are 1.0, 1.0, 1.0, and 1.0 respectively.  
 < LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Limit of detection (LOD, see Data Analysis section) for Survey years 03-04, 05-06, 07-08 and 09-10 are 0.4, 0.4, 0.4, and 0.4 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Factsheet: [http://www.cdc.gov/biomonitoring/Arsenic\\_FactSheet.html](http://www.cdc.gov/biomonitoring/Arsenic_FactSheet.html)

## Urinary Monomethylarsonic acid

Metabolite of Arsenic

Geometric mean and selected percentiles of urine concentrations (in µg As/L) for the U.S. population from the National Health and Nutrition Examination Survey.

	Survey years	Geometric mean (95% conf. interval)	Selected percentiles (95% confidence interval)				Sample size

Limit of detection (LOD, see Data Analysis section) for Survey years 03-04, 05-06, 07-08 and 09-10 are 0.9, 0.9, 0.9, and 0.9 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

	07-08	*	< LOD	< LOD	< LOD	< LOD	1300
	09-10	*	< LOD	< LOD	< LOD	< LOD	1450

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, 03-04, 05-06, 07-08, and 09-10 are 0.13, 0.13, 0.13, 0.072, 0.072, and 0.072 respectively.  
 < LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, 03-04, 05-06, 07-08, 09-10, and 11-12 are 0.3, 0.3, 0.14, 0.2, 0.2, 0.2, and 0.16 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, 03-04, 05-06, 07-08, and 09-10 are 0.06, 0.06, 0.06, 0.042, 0.042, and 0.042 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

\*\*All results are corrected for molybdenum oxide interference in the ICP-MS method.

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, 03-04, 05-06, 07-08, and 09-10 are 0.06, 0.06, 0.06, 0.042, 0.042, and 0.042 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result

\*\*All results are corrected for molybdenum oxide interference in the ICP-MS method.

Limit of detection (LOD, see Data Analysis section) for Survey year 11-12 is 1.06.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

Limit of detection (LOD, see Data Analysis section) for Survey year 11-12 is 0.12.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

	09-10	*	< LOD	< LOD	.010 (<LOD-.015)	.017 (.009-.051)	1450

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, 03-04, 05-06, 07-08, and 09-10 are 0.04, 0.04, 0.07, 0.009, 0.009, and 0.009 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Females	99-00	*	< LOD	< LOD	< LOD	< LOD	1238
	01-02	*	< LOD	< LOD	< LOD	< LOD	1355
	03-04	*	< LOD	< LOD	< LOD	< LOD	1277
	05-06	*	< LOD	< LOD	.026 (<LOD-.030)	.033 (.029-.050)	1305
	07-08	*	< LOD	< LOD	< LOD	.033 (<LOD-.043)	1300
	09-10	*	< LOD	< LOD	.027 (<LOD-.032)	.038 (.030-.054)	1450

< LOD means less than the limit of detection for the urine levels not corrected for creatinine.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Biomonitoring Summary: [http://www.cdc.gov/biomonitoring/Platinum\\_BiomonitoringSummary.html](http://www.cdc.gov/biomonitoring/Platinum_BiomonitoringSummary.html)

## Urinary Platinum (creatinine corrected)

Geometric mean and selected percentiles of urine concentrations (in µg/g of creatinine) for the U.S. population from the National Health and Nutrition Examination Survey.

Race/ethnicity	Survey years	Geometric mean (95% conf. interval)	Selected percentiles (95% confidence interval)				Sample size
			50th	75th	90th	95th	
Mexican Americans	99-00	*	< LOD	< LOD	< LOD	< LOD	884

Limit of detection (LOD, see Data Analysis section) for Survey years 03-04, 05-06, 07-08 and 09-10 are 0.4, 0.1, 0.1, and 0.1 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 03-04, 05-06, 07-08, and 09-10 are 0.05, 0.2, 0.1, 0.1, and 0.1 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 03-04, 05-06, 07-08, and 09-10 are 0.2, 0.5, 0.2, 0.2, and 0.1 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

\*\*To correct for inadequate purity in the analytical standards, all results and LODs have been adjusted by a factor of 0.872 for survey periods 1999-2000 and 2003-2010 compared with results previously released.

	09-10	*	< LOD	< LOD	< LOD	< LOD	1350

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, 03-04, 05-06, 07-08, and 09-10 are 1.81, 0.603, 0.402, 0.603, 0.603, and 0.402 respectively. < LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

\*\*To correct for inadequate purity in the analytical standards, all results and LODs have been adjusted by a factor of 2.01 for survey periods 1999-2008 compared with results previously released.

	07-08	*	< LOD	< LOD	1.39 (<LOD-1.69)	2.77 (2.00-3.70)	1310
	09-10	*	< LOD	1.52 (1.12-1.91)	4.70 (3.80-5.47)	12.3 (6.61-16.5)	1350

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, 03-04, 05-06, 07-08, and 09-10 are 1.23, 1.23, 1.54, 1.23, 1.23, and 0.77 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

\*\*To correct for inadequate purity in the analytical standards, all results and LODs have been adjusted by a factor of 1.54 for survey periods 1999-2008 compared with results previously reported.

< LOD means less than the limit of detection for the urine levels not corrected for creatinine.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

\*\*To correct for inadequate purity in the analytical standards, all results and LODs have been adjusted by a factor of 1.54 for survey periods 1999-2008 compared with results previously reported

< LOD means less than the limit of detection for the urine levels not corrected for creatinine.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

	07-08	*	< LOD	< LOD	< LOD	< LOD	1310
	09-10	*	< LOD	< LOD	< LOD	< LOD	1350

Limit of detection (LOD, see Data Analysis section) for Survey years 99-00, 01-02, 03-04, 05-06, 07-08, and 09-10 are 1.51, 1.68, 1.68, 1.85, 1.85, and 0.84 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

\*\*To correct for inadequate purity in the analytical standards, all results and LODs have been adjusted by a factor of 1.68 for survey periods 1999-2008 compared with results previously reported.

< LOD means less than the limit of detection for the urine levels not corrected for creatinine.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

\*\*To correct for inadequate purity in the analytical standards, all results and LODs have been adjusted by a factor of 1.68 for survey periods 1999-2008 compared with results previously reported.

## Urinary 9-Hydroxyfluorene (creatinine corrected)

Metabolite of Fluorene

Geometric mean and selected percentiles of urine concentrations (in ng/g of creatinine) for the U.S. population from the National Health and Nutrition Examination Survey.

Males	03-04	*	< LOD	< LOD	< LOD	< LOD	669
	05-06	*	< LOD	< LOD	< LOD	< LOD	1495
Females	03-04	*	< LOD	< LOD	< LOD	< LOD	697
	05-06	*	< LOD	< LOD	< LOD	< LOD	1660
<b>Race/ethnicity</b>							
Mexican Americans	03-04	*	< LOD	< LOD	< LOD	< LOD	267
	05-06	*	< LOD	< LOD	< LOD	< LOD	758
Non-Hispanic blacks	03-04	*	< LOD	< LOD	< LOD	< LOD	300
	05-06	*	< LOD	< LOD	< LOD	< LOD	830
Non-Hispanic whites	03-04	*	< LOD	< LOD	< LOD	< LOD	694
	05-06	*	< LOD	< LOD	< LOD	< LOD	1335

Limit of detection (LOD, see Data Analysis section) for Survey years 03-04 and 05-06 are 0.011 and 0.011 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

	05-06	*	< LOD	< LOD	< LOD	< LOD	1237

Limit of detection (LOD, see Data Analysis section) for Survey years 01-02, 03-04, and 05-06 are 0.01, 0.005, and 0.005 respectively.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

## Adult Cigarette Smokers and Nonsmokers: Analysis of Select Chemicals in a Special Sample

### Statement of need

The Family Smoking Prevention and Tobacco Control Act of 2009 gave the Food and Drug Administration regulatory authority over tobacco products. In Section 907(a), the Act states that the Secretary of Health and Human Services shall establish tobacco product standards. These product standards will include provisions for the testing of tobacco products. To determine the effectiveness of these product standards, surveillance systems need to be in place before the standards are enacted to determine their impact on exposure among people who continue to use tobacco products. NHANES is an ideal source of human samples for assessing smokers in multiple locations around the country. NHANES will provide a robust dataset for identifying changes in exposure of smokers that follow enactment of tobacco product standards.

### Special Sample in NHANES

Beginning with the NHANES 2011-2012 survey period, a Special Sample was selected to allow measurement of certain groups of chemicals that are associated with tobacco smoke exposure. The Special Sample consisted of adults (defined as ages 20 years and older) in the representative sample for that chemical group as well as all adults who reported that they were currently cigarette smokers. Adult cigarette smokers were included if they answered “Yes” to the following question: “Have you smoked at least 100 cigarettes in your life?” and then, confirmed that they smoke every day (SMQ020=1 and SMQ040=1 in the Smoking-Cigarette Use questionnaire, SMQ\_G, available at: [http://www.cdc.gov/nchs/nhanes/nhanes2011-2012/SMQ\\_G.htm](http://www.cdc.gov/nchs/nhanes/nhanes2011-2012/SMQ_G.htm)).

### Special Sample in the *Updated Tables*

We categorized as smokers those participants with serum cotinine concentrations greater than 10 ng/mL. There were 4.17% (weighted) of the total sample without a serum cotinine concentration. For those participants, we used their responses to the Smoking-Cigarette Use (SMQ\_G) questionnaire: “Have you smoked at least 100 cigarettes in your life?” (SMQ020=1), and then, confirmed that they smoke every day (SMQ040=1) or that they smoke some days (SMQ040=2). We excluded any adult who reported that they did not smoke cigarettes but used any of the following non-cigarette tobacco products: cigars; pipes; chewing tobacco; snuff; or nicotine patch, gum or other replacement product. This resulted in exclusion of 2.47% (weighted) from the cigarette smokers in the Special Sample for NHANES 2011-2012. The nonsmoker category was comprised of the remaining adults in the Special Sample who were not categorized as smokers of any tobacco products.

In the data tables, results of the chemical measurements are displayed separately for adult cigarette smokers and nonsmokers. Each data table displays geometric mean and selected percentiles by three categories: total; age group (20-49 years, 50 years and older), and gender (male, female). Racial/ethnic categories are not presented because the sample sizes were too small in one or more of the categories. Future *Updated Tables* will present data tables for additional chemical groups that were measured in the Special Sample.

## Urinary Antimony

Geometric mean and selected percentiles of urine concentrations (in µg/L) for the U.S. adult population from the National Health and Nutrition Examination Survey by smoking status.

	Survey years	Geometric mean (95% conf. interval)	Selected percentiles (95% confidence interval)				Sample size

<b>Gender</b>							
Males	11-12	*	< LOD	< LOD	< LOD	< LOD	631
Females	11-12	*	< LOD	< LOD	< LOD	< LOD	701

Tobacco product users who did not smoke cigarettes were excluded. See Adult Cigarette Smokers and Nonsmokers: Analysis of Select Chemicals in a Special Sample. Limit of detection (LOD, see Data Analysis section) for Survey year 11-12 is 0.25.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

## Urinary Trimethylarsine oxide (creatinine corrected)

Geometric mean and selected percentiles of urine concentrations (in µg As/g of creatinine) for the U.S. adult population from the National Health and Nutrition Examination Survey by smoking status.

	Survey years	Geometric mean (95% conf. interval)	Selected percentiles (95% confidence interval)				Sample size
			50 <sup>th</sup>	75 <sup>th</sup>	90 <sup>th</sup>	95 <sup>th</sup>

<b>Gender</b>							
Males	11-12	*	< LOD	< LOD	< LOD	< LOD	625
Females	11-12	*	< LOD	< LOD	< LOD	< LOD	683

Tobacco product users who did not smoke cigarettes were excluded. See Adult Cigarette Smokers and Nonsmokers: Analysis of Select Chemicals in a Special Sample.

Limit of detection (LOD, see Data Analysis section) for Survey year 11-12 is 12.6.

< LOD means less than the limit of detection, which may vary for some chemicals by year and by individual sample.

\* Not calculated: proportion of results below limit of detection was too high to provide a valid result.

## Urinary N-Acetyl-S-(1,2-dichlorovinyl)-L-cysteine (creatinine corrected)

Metabolite of Trichloroethene

Geometric mean and selected percentiles of concentrations (in µg/g of creatinine) for the U.S. adult population from the National Health and Nutrition Examination Survey by smoking status.

	Survey years	Geometric mean (95% conf. interval)	Selected percentiles (95% confidence interval)				Sample size
			50 <sup>th</sup>	75 <sup>th</sup>	90 <sup>th</sup>	95 <sup>th</sup>	
<b>Cigarette Smokers</b>

## Special Analysis of Pooled Samples for Select Chemicals

### Important Notice to the *Updated Tables, July 2014*: Pooled Sample Data Tables have been Withdrawn as of July 18, 2014

Data tables for the chemicals measured in pooled samples for NHANES 2005-2006 and 2007-2008 have been withdrawn as of July 18, 2014, because of misspecification of the pooled-sample weights. When corrections are completed and the data files are available from NHANES, pooled sample data tables will be provided in a future *Updated Tables*.

The chemical groups affected by the NHANES data withdrawal are the following:

- organochlorine pesticides and metabolites (2005-2006 and 2007-2008);
- polybrominated diphenyl ethers and PBB 153 (2005-2006 and 2007-2008);
- polybrominated dibenzo-*p*-dioxins and dibenzofurans (2005-2006);
- polychlorinated dibenzo-*p*-dioxins and dibenzofurans (2005-2006);
- coplanar polychlorinated biphenyls (PCBs) (2005-2006);
- mono-*ortho*-substituted PCBs (2005-2006 and 2007-2008);
- non-dioxin-like PCBs (2005-2006 and 2007-2008).

The data and data tables presenting individual sample results for these chemicals prior to NHANES 2005 are not affected by the sample weight issue and are available in the *Fourth National Report on Human Exposure to Environmental Chemicals, 2009*, at:

<http://www.cdc.gov/exposurereport/>.

### **Organophosphorus Insecticides: Dialkyl Phosphate Metabolites**

Bravo R, Caltabiano LM, Weerasekera G, Whitehead RD, Fernandez C, Needham LL, et al. Measurement of dialkyl phosphate metabolites of organophosphorus pesticides in human urine using lyophilization with gas chromatography-tandem mass spectrometry and isotope dilution quantification. *J Expo Anal Environ Epidemiol* 2004;14:249-59.

### **Pyrethroid Metabolites**

Davis MD, Wade EL, Restrepo PR, Roman-Esteva W, Bravo R, Kuklenyik P, Calafat AM. Semi-automated solid phase extraction method for the mass spectrometric quantification of 12 specific metabolites of organophosphorus pesticides, synthetic pyrethroids, and select herbicides in human urine. *J Chromatogr B* 2013;929:18-26. (NHANES 2007-2008 and later)

Olsson AO, Baker SE, Nguyen JV, Romanoff LC, Udunka SO, Walker RD, et al. A liquid chromatography-tandem mass spectrometry multiresidue method for quantification of specific metabolites of organophosphorus pesticides, synthetic pyrethroids, selected herbicides, and DEET in human urine. *Anal Chem* 2004;76(9):2453-61. (NHANES 1999-2002)

### **Metals and Metalloids**

Caldwell KL, Hartel J, Jarrett J, Jones RL. Inductively coupled plasma mass spectrometry to measure multiple toxic elements in urine in NHANES 1999-2000. *Atomic Spectroscopy*. 2005;26(1):1-7.

Jarrett JM, Jones RL, Caldwell KL, Verdon CP. Total urine arsenic measurements using inductively coupled plasma mass spectrometry with a dynamic reaction cell. *Atomic Spectroscopy* 2007;28(4):113-22. (after NHANES 2001-2002)

Paschal DC, Ting BG, Morrow JC, Pirkle JL, Jackson RJ, Sampson EJ, et al. Trace metals in urine of United States residents: reference range concentrations. *Environ Res* 1998;76:53-9.

Sommer YL, Verdon CP, Fresquez MR, Ward CD, Wood EB, Pan Y, et al. Measurement of mercury species in human blood using triple spike isotope dilution with SPME-GC-ICP-DRC-MS. (submitted for publication)

Verdon CP, Caldwell KL, Fresques MR, Jones RL. Determination of seven arsenic compounds in urine by HPLC-ICP-DRC-MS: a CDC population biomonitoring method. *Anal Bioanal Chem* 2008;393(3):939-47. (after NHANES 2001-2002)

## **Parabens**

Ye X, Kuklennyik Z, Bishop AM, Needham LL, Calafat AM. Quantification of the urinary concentrations of parabens in humans by on-line solid phase extraction-high performance liquid chromatography–isotope dilution tandem mass spectrometry. *J Chromatogr B* 2006;844:53-9.

## **Perchlorate and Other Anions**

Valentin-Blasini L, Blount BC, Delinsky A. Quantification of iodide and sodium-iodide symporter inhibitors in human urine using ion chromatography tandem mass spectrometry. *J Chromatogr A* 2007;1155(1):40-6.

Valentin-Blasini L, Mauldin JP, Maple D, Blount BC. Analysis of perchlorate in human urine using ion chromatography and electrospray tandem mass spectrometry. *Anal Chem* 2005;77(8):2475-81.

## **Perfluorinated Compounds: Surfactants**

Kuklennyik Z, Needham LL, Calafat AM. Measurement of 18 Perfluorinated Organic Acids and Amides in Human Serum Using On-Line Solid-Phase Extraction. *Anal Chem* 2005;77:6085-91.

Kuklennyik Z, Reich JA, Tully JS, Needham LL, Calafat AM. Automated solid phase extraction and measurement of perfluorinated organic acids and amides in human serum and milk. *Environ Sci Technol* 2004;38:3698-704.

## **Phthalate and Phthalate Alternative Metabolites**

Blount BC, Milgram KE, Silva M, Malek N, Reidy J, Needham LL, et al. Quantitative detection of eight phthalate metabolites in human urine using HPLC-APCI-MS/MS. *Anal Chem* 2000;72:4127-34. (NHANES 1999-2000)

Kato K, Silva MJ, Needham LL, Calafat AM. Determination of 16 phthalate metabolites in urine using automated sample preparation and on-line preconcentration/high-performance liquid chromatography/tandem mass spectrometry. *Anal Chem* 2005;77(9):2985-91. (NHANES 2003-2004)

Silva MJ, Jia T, Samandar E, Preau JL, Calafat AM. Environmental exposure to plasticizer 1,2-cyclohexane dicarboxylic acid, diisononyl ester (DINCH) in US adults (2000-2012). *Environ Res* 2013; 126: 159-163. (NHANES 2011-2012)

Silva MJ, Malek NA, Hodge CC, Reidy JA, Kato K, Barr DB, et al. Improved quantitative detection of 11 urinary phthalate metabolites in humans using liquid chromatography-atmospheric pressure chemical ionization tandem mass spectrometry. *J Chromatogr B* 2003;789:393-404. (NHANES 1999-2000)

Silva MJ, Samandar E, Preau JL, Reidy JA, Needham LL, Calafat AM. Quantification of 22 phthalate metabolites in human urine. *J Chromatogr B* 2007;860:106-12. (NHANES 2005-2012)

Silva MJ, Slakman AR, Reidy JA, Preau JLJ, Herbert AR, Samandar E, et al. Analysis of human urine for 15 phthalate metabolites using automated solid-phase extraction. *J Chromatogr B* 2004;805:161-7. (NHANES 2001-2002)

### **Phytoestrogens and Metabolites**

Kuklennyik Z, Ye X, Reich JA, Needham LL, Calafat AM. Automated on-line and off-line solid phase extraction methods for measuring isoflavones and lignans in urine. *J Chromatogr Sci* 2004; 42:495-500. (NHANES 2001-2002)

Parker DL, Rybak ME, Pfeiffer CM. Phytoestrogen biomonitoring: an extractionless LC-MS/MS method for measuring urinary isoflavones and lignans by use of atmospheric pressure photoionization (APPI). *Anal Bioanal Chem* 2012;402:1123-1136. (NHANES 2005-2006 and later)

Rybak ME, Parker DL, Pfeiffer CM. Determination of urinary phytoestrogens by HPLC-MS/MS: A comparison of atmospheric pressure chemical ionization (APCI) and electrospray ionization (ESI). *J Chromatogr R* 2008;861:145-150. (NHANES 2003-2004)

Valentin-Blasini L, Blount BC, Rogers HS, Needham LL. HPLC-MS/MS method for the measurement of seven phytoestrogens in human serum and urine. *J Expo Anal Environ Epidemiol* 2000;10:799-807. (NHANES 1999-2000)

### **Polycyclic Aromatic Hydrocarbon Metabolites**

Li Z, Romanoff LC, Trinidad DA, Hussain N, Jones RS, Porter EN, et al. Measurement of urinary Monohydroxy polycyclic aromatic hydrocarbons using automated liquid-liquid extraction and gas chromatography/isotope dilution high-resolution mass spectrometry. *Anal Chem* 2006;78:5744-51.

### **Volatile Organic Compounds (VOCs), including Disinfection By-Products**

Alwis KU, Blount BC, Silva LK, Smith MM, Loose KH. Method for quantifying nitromethane in blood as a potential biomarker of halonitromethane exposure. *Environ Sci Technol* 2008;42 (7): 2522-7.

Bonin MA, Silva LK, Smith MM, Ashley DL, Blount BC. Measurement of trihalomethanes and methyl tert-butyl ether in whole blood using gas chromatography with high-resolution mass spectrometry. *J Anal Toxicol* 2005;29(2):81-9.

Chambers DM, Blount BC, McElprang DO, Waterhouse MG, Morrow J. Picogram measurement of volatile n-alkanes (n-hexane through n-dodecane) in blood using solid-phase microextraction to assess nonoccupational petroleum-based fuel exposure. *Anal Chem* 2008;80(12): 4666-74.

Chambers DM, McElprang DO, Mauldin JP, Hughes TM, Blount BC. Identification and elimination of polysiloxane curing agent interference encountered in the quantification of low-picogram per milliliter methyl tert-butyl ether in blood by solid-phase microextraction headspace analysis. *Anal Chem* 2005;77 (9): 2912-9.

Chambers DM, McElprang DO, Waterhouse MG, Blount BC. An improved approach for accurate quantitation of benzene, toluene, ethylbenzene, xylene, and styrene in blood. *Anal Chem* 2006;78(15): 5375-83.

### **Volatile Organic Compound (VOC) Metabolites**

Alwis KU, Blount BC, Britt AS, Patel D, Ashley DL. Simultaneous analysis of 28 urinary VOC metabolites using ultra high performance liquid chromatography coupled with electrospray ionization tandem mass spectrometry (UPLC-ESI/MSMS). *Anal Chim Acta* 2012;750:152-60.

## Appendix D. Limit of Detection Table

The analytical limit of detection (LOD) for each of the different chemical measurements is presented in the table below. The LOD is the concentration at which the measurement has a 95% probability of being greater than zero (Taylor, 1987). As analytical methods improve, LODs will often change. For this reason, LOD results are reported by survey periods (e.g., 1999-2000, 2001-2002, etc.).
