The background of the slide features a large, faded, light blue seal of the United States Environmental Protection Agency (EPA). The seal is circular and contains a central emblem with a stylized flower or leaf design. The words "ENVIRONMENTAL PROTECTION AGENCY" are written around the perimeter of the seal.

The Challenge of Molds for the U.S. Army

Steve Vesper
US EPA Cincinnati

Trench Foot

Trench Foot results from prolonged exposure of the feet to wetness and cold at temperatures from just above freezing to 10 degrees C.

Trench Foot is usually associated with long periods of standing or keeping the feet still.

Signs & Symptoms | First Aid Treatment

Signs & Symptoms

These may vary from case to case and some people will show no signs.

The following are the normal signs and symptoms of trench foot:

- An uncomfortable feeling of numbness in the feet developing over 7-10 days
- Feet may be cold, heavy and painful
- Toes and ankles are stiff and walking is difficult
- Prickly or tingling sensations
- Swelling in the affected area

First Aid Treatment for Trench Foot

Step 1 Warm the affected area in a bath (about 37 degrees C) to relieve pain

Step 2 Dry the affected area thoroughly and keep it clean

Step 3 Elevate the feet to reduce swelling

Step 4 Keep the patient warm so the feet have a generous supply of blood

^a Reported as average number of cells per mg dust.

^b Reported as average number of cells per sample since insufficient dust was collected over the sample area. This reflected reduced dust loading after repeated HEPA vacuuming.
