

**Figure 1:** Lost production percentages of dexamethasone suppressed CF-1 and C57BL/6 mice infected with *C. parvum*. Closed circles are the lost production percentage for 5 experiments using the CF-1 mice and the black horizontal line is the mean of 5 experiments. The closed boxes and horizontal black line are the same for the C57BL/6 mice, respectively. The differences between the two means are significantly different  $P = 0.0068$  by Student's T-test.
