

Brownfields 2012 Cleanup Grant Fact Sheet **Shelby, MT**

EPA Brownfields Program

EPA's Brownfields Program empowers states, communities, and other stakeholders to work together to prevent, assess, safely clean up, and sustainably reuse brownfields. A brownfield site is real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. In 2002, the Small Business Liability Relief and Brownfields Revitalization Act was passed to help states and communities around the country clean up and revitalize brownfields sites. Under this law, EPA provides financial assistance to eligible applicants through four competitive grant programs: assessment grants, revolving loan fund grants, cleanup grants, and job training grants. Additionally, funding support is provided to state and tribal response programs through a separate mechanism.

The information presented in this fact sheet comes from the grant proposal; EPA cannot attest to the accuracy of this information. The cooperative agreement for the grant has not yet been negotiated. Therefore, activities described in this fact sheet are subject to change.

Cleanup Grant

\$200,000 for hazardous substances

EPA has selected the City of Shelby for a brownfields cleanup grant. Hazardous substances grant funds will be used to clean up the historic Rainbow Hotel property at 401 Main Street in downtown Shelby's business district. The historic building, which was used exclusively as a hotel from 1923 through the early 1990s, is contaminated with heavy metals, inorganic contaminants, and mold.
