delta-Hexachlorocyclohexane (delta-HCH); CASRN 319-86-8

Human health assessment information on a chemical substance is included in the IRIS database only after a comprehensive review of toxicity data, as outlined in the IRIS assessment development process. Sections I (Health Hazard Assessments for Noncarcinogenic Effects) and II (Carcinogenicity Assessment for Lifetime Exposure) present the conclusions that were reached during the assessment development process. Supporting information and explanations of the methods used to derive the values given in IRIS are provided in the guidance documents located on the IRIS website.

STATUS OF DATA FOR delta-HCH

File First On-Line 03/31/1987

I. Chronic Health Hazard Assessments for Noncarcinogenic Effects

I.A. Reference Dose for Chronic Oral Exposure (RfD)

Substance Name — delta-Hexachlorocyclohexane (delta-HCH)
CASRN — 319-86-8

Not available at this time.

I.B. Reference Concentration for Chronic Inhalation Exposure (RfC)

Substance Name — delta-Hexachlorocyclohexane (delta-HCH)
CASRN — 319-86-8
Not available at this time.

II. Carcinogenicity Assessment for Lifetime Exposure

Substance Name — delta-Hexachlorocyclohexane (delta-HCH)
CASRN — 319-86-8
Last Revised — 03/31/1987

Section II provides information on three aspects of the carcinogenic assessment for the substance in question; the weight-of-evidence judgment of the likelihood that the substance is a human carcinogen, and quantitative estimates of risk from oral exposure and from inhalation exposure. The quantitative risk estimates are presented in three ways. The slope factor is the result of application of a low-dose extrapolation procedure and is presented as the risk per (mg/kg)/day. The unit risk is the quantitative estimate in terms of either risk per ug/L drinking water or risk per ug/cu.m air breathed. The third form in which risk is presented is a drinking water or air concentration providing cancer risks of 1 in 10,000, 1 in 100,000 or 1 in 1,000,000. The rationale and methods used to develop the carcinogenicity information in IRIS are described in The Risk Assessment Guidelines of 1986 (EPA/600/8-87/045) and in the IRIS Background Document. IRIS summaries developed since the publication of EPA's more recent Proposed Guidelines for Carcinogen Risk Assessment also utilize those Guidelines where indicated (Federal Register 61(79):17960-18011, April 23, 1996). Users are referred to Section I of this IRIS file for information on long-term toxic effects other than carcinogenicity.

II.A. Evidence for Human Carcinogenicity

II.A.1. Weight-of-Evidence Characterization

Classification — D; not classifiable as to human carcinogenicity

II.A.2. Human Carcinogenicity Data

None.

II.A.3. Animal Carcinogenicity Data

No neoplastic or nonneoplastic effects were noted in livers of male dd mice or Wistar rats given dietary delta-HCH at concentrations ranging from 100-1000 ppm (Ito et al., 1975, 1973a,b; Nagasaki et al., 1972). Both of these studies utilized small numbers of animals treated for 24 weeks and examined only livers. Goto et al. (1972) observed increased incidence of benign and
malignant hepatomas in ICR-JCL mice fed for 26 weeks with a 600 ppm mixture of delta- and epsilon-HCH. Individual isomers were not tested.

II.A.4. Supporting Data for Carcinogenicity

delta-HCH is structurally related to carcinogenic HCH.

II.B. Quantitative Estimate of Carcinogenic Risk from Oral Exposure

Not available.

II.C. Quantitative Estimate of Carcinogenic Risk from Inhalation Exposure

Not available.

II.D. EPA Documentation, Review, and Contacts (Carcinogenicity Assessment)

II.D.1. EPA Documentation

The 1986 Health and Environmental Effects Profile has received an Agency review.

II.D.2. EPA Review (Carcinogenicity Assessment)

Agency Work Group Review — 12/17/1986

Verification Date — 12/17/1986

Screening-Level Literature Review Findings — A screening-level review conducted by an EPA contractor of the more recent toxicology literature pertinent to the cancer assessment for delta-Hexachlorocyclohexane (delta-HCH) conducted in August 2003 did not identify any critical new studies. IRIS users who know of important new studies may provide that information to the IRIS Hotline at hotline.iris@epa.gov or 202-566-1676.
II.D.3. EPA Contacts (Carcinogenicity Assessment)

Please contact the IRIS Hotline for all questions concerning this assessment or IRIS, in general, at (202)566-1676 (phone), (202)566-1749 (FAX) or hotline.iris@epa.gov (internet address).

VI. Bibliography

Substance Name — delta-Hexachlorocyclohexane (delta-HCH)
CASRN — 319-86-8

VI.A. Oral RfD References

None

VI.B. Inhalation RfD References

None

VI.C. Carcinogenicity Assessment References

VII. Revision History

Substance Name — delta-Hexachlorocyclohexane (delta-HCH)
CASRN — 319-86-8
