Protecting Water Quality...
...at Construction Sites
It’s Everyone’s Responsibility

Silt Fencing
- Inspect and maintain silt fences after each rainstorm.
- Make sure the bottom of the silt fence is buried in the ground.
- Securely attach the material to the stakes.
- Don’t place silt fences in the middle of a waterway or use them as a check dam.
- Make sure that stormwater is not flowing around the silt fence.

Construction Phasing
- Sequence construction activity so that the soil is not exposed for long periods of time.
- Install sediment controls before site grading begins.
- Schedule site stabilization, such as landscaping, to begin as soon as the site has been graded to its final contour.

Vegetative Buffers
- Protect and install vegetative buffers along waterbodies to slow and filter stormwater runoff.
- Maintain buffers periodically to ensure their effectiveness.
Storm Drain Inlet Protection

♦ Use rock or other appropriate material to cover the storm drain inlet to filter out trash and debris.
♦ Make sure the rock size is appropriate (usually 1 to 2 inches in diameter).
♦ If you use inlet filters, maintain them regularly.

Construction Entrances

♦ Remove mud and dirt from tires of construction vehicles before they enter a paved roadway.
♦ Properly size entrance BMPs for all anticipated vehicles.
♦ Make sure that the construction entrance does not become buried in soil.

Protect Natural Features

♦ Minimize clearing.
♦ Minimize the amount of exposed soil.
♦ Identify and protect areas where existing vegetation, such as trees, will not be disturbed by construction activity.
