Presentation Overview

- What is a mind map?
- Why did we use a mind map for this meeting?
- How did we combine all the individual mind maps?
- What does the final mind map look like?
- Any clarifying questions?

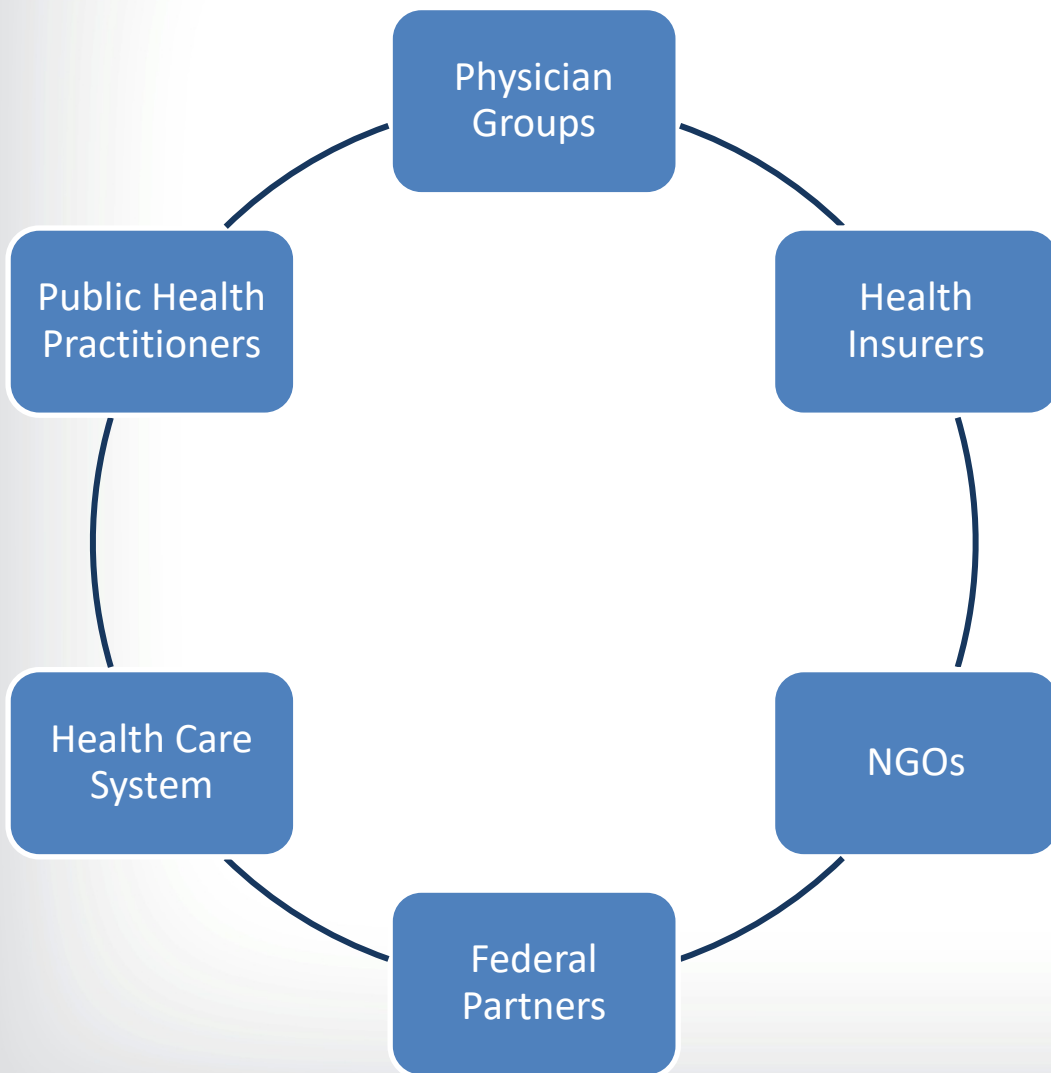

What is a mind map?

Mind mapping is a tool to visually organize information in a hierarchical manner and illustrate relationships between topics

Why did we use a mind map for this meeting?

Convene partners from public health, health care, and health care systems

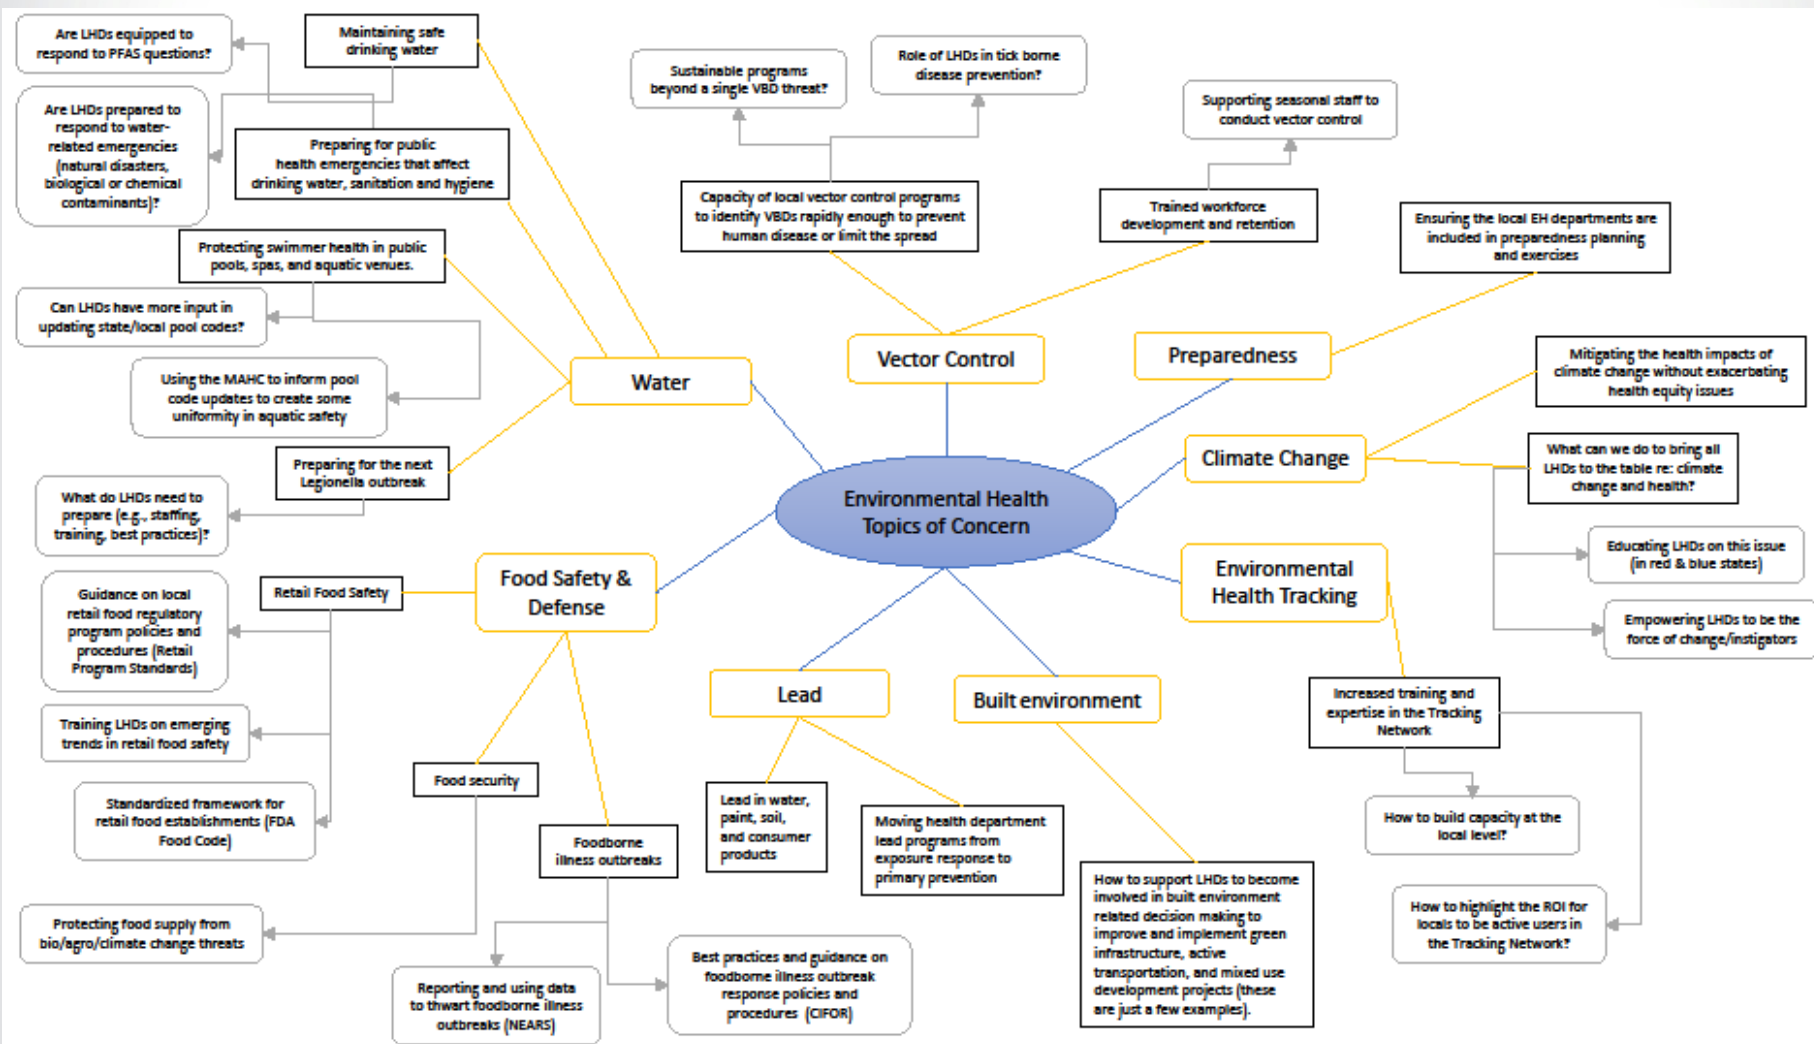

Identify environmental health topics of mutual interest

Brainstorm innovative cross-disciplinary initiatives and solutions

Here's one of your mind maps...

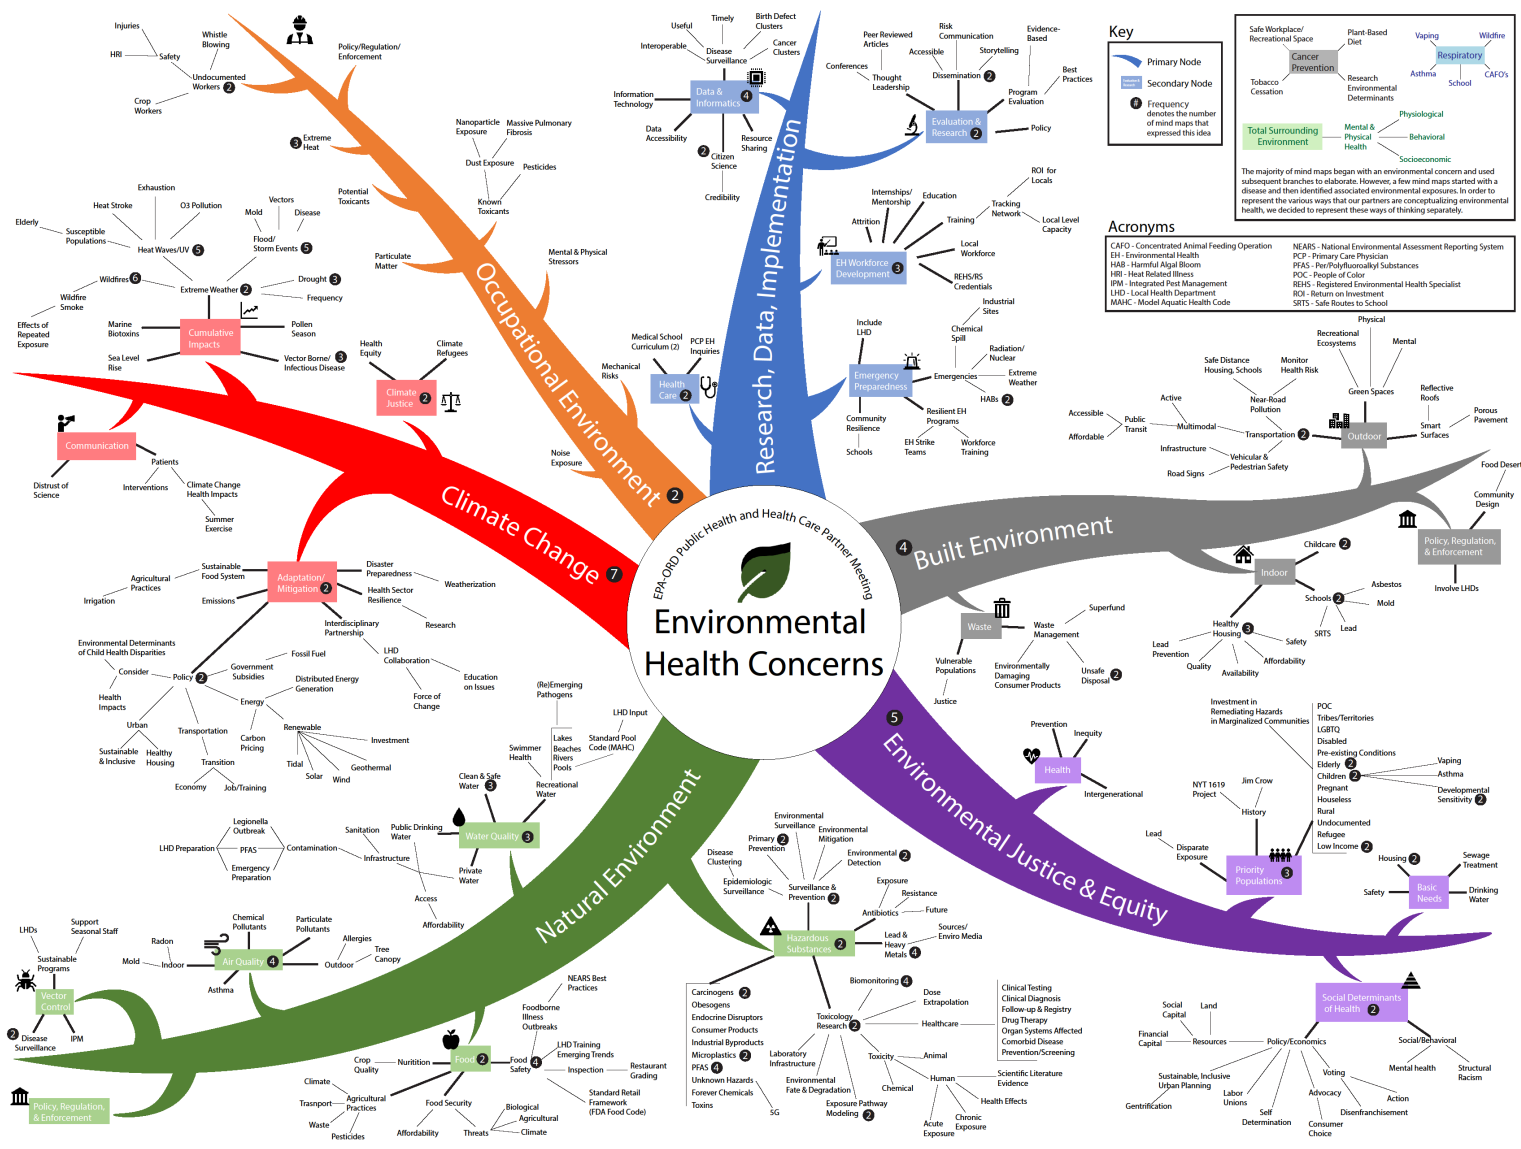

How did we combine all the individual mind maps?

1. Collected and recorded every primary node from each individual map
2. Grouped nodes with exact or similar language and developed new themes
3. Resulted in 18 themes, which were then reduced to 6 new primary nodes
4. Subsequent nodes were then denoted into new classes (secondary, tertiary, quarternary)

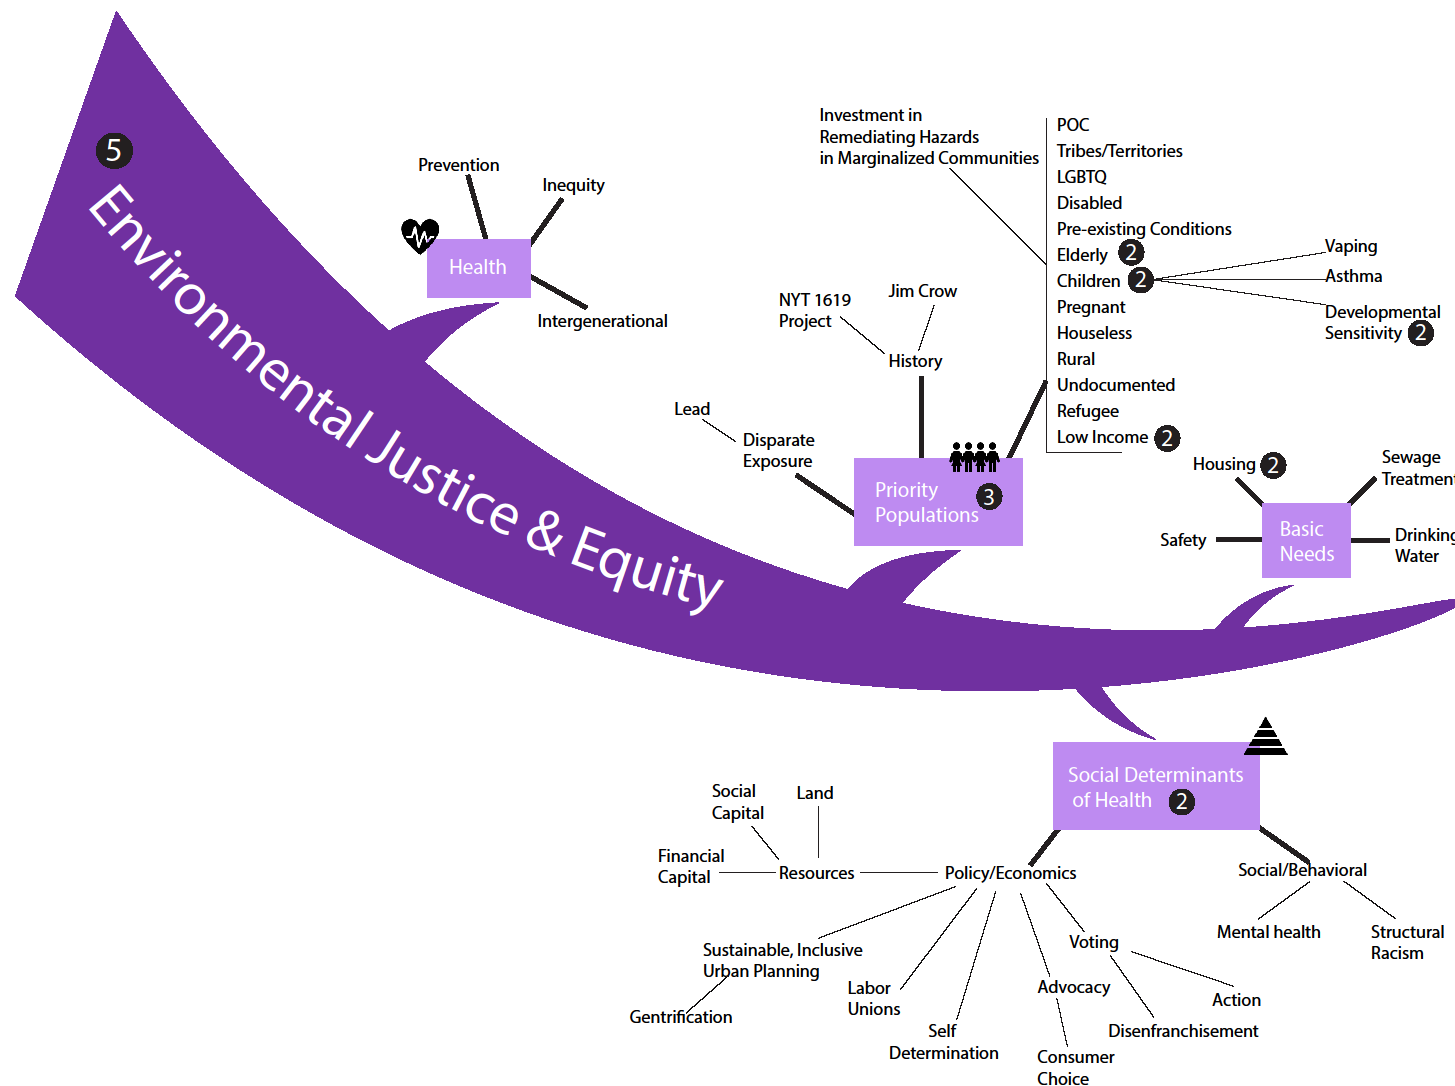

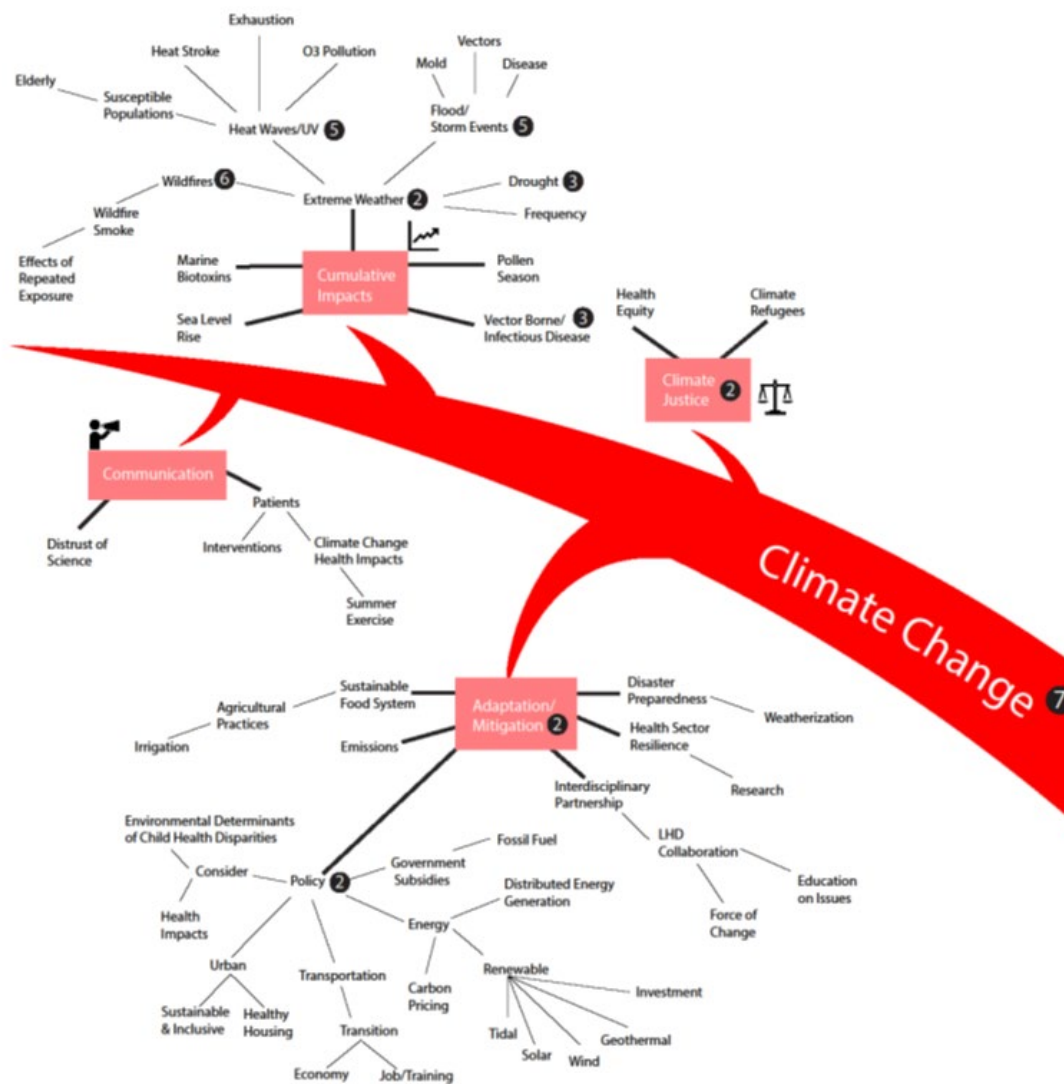

Master Mind Map

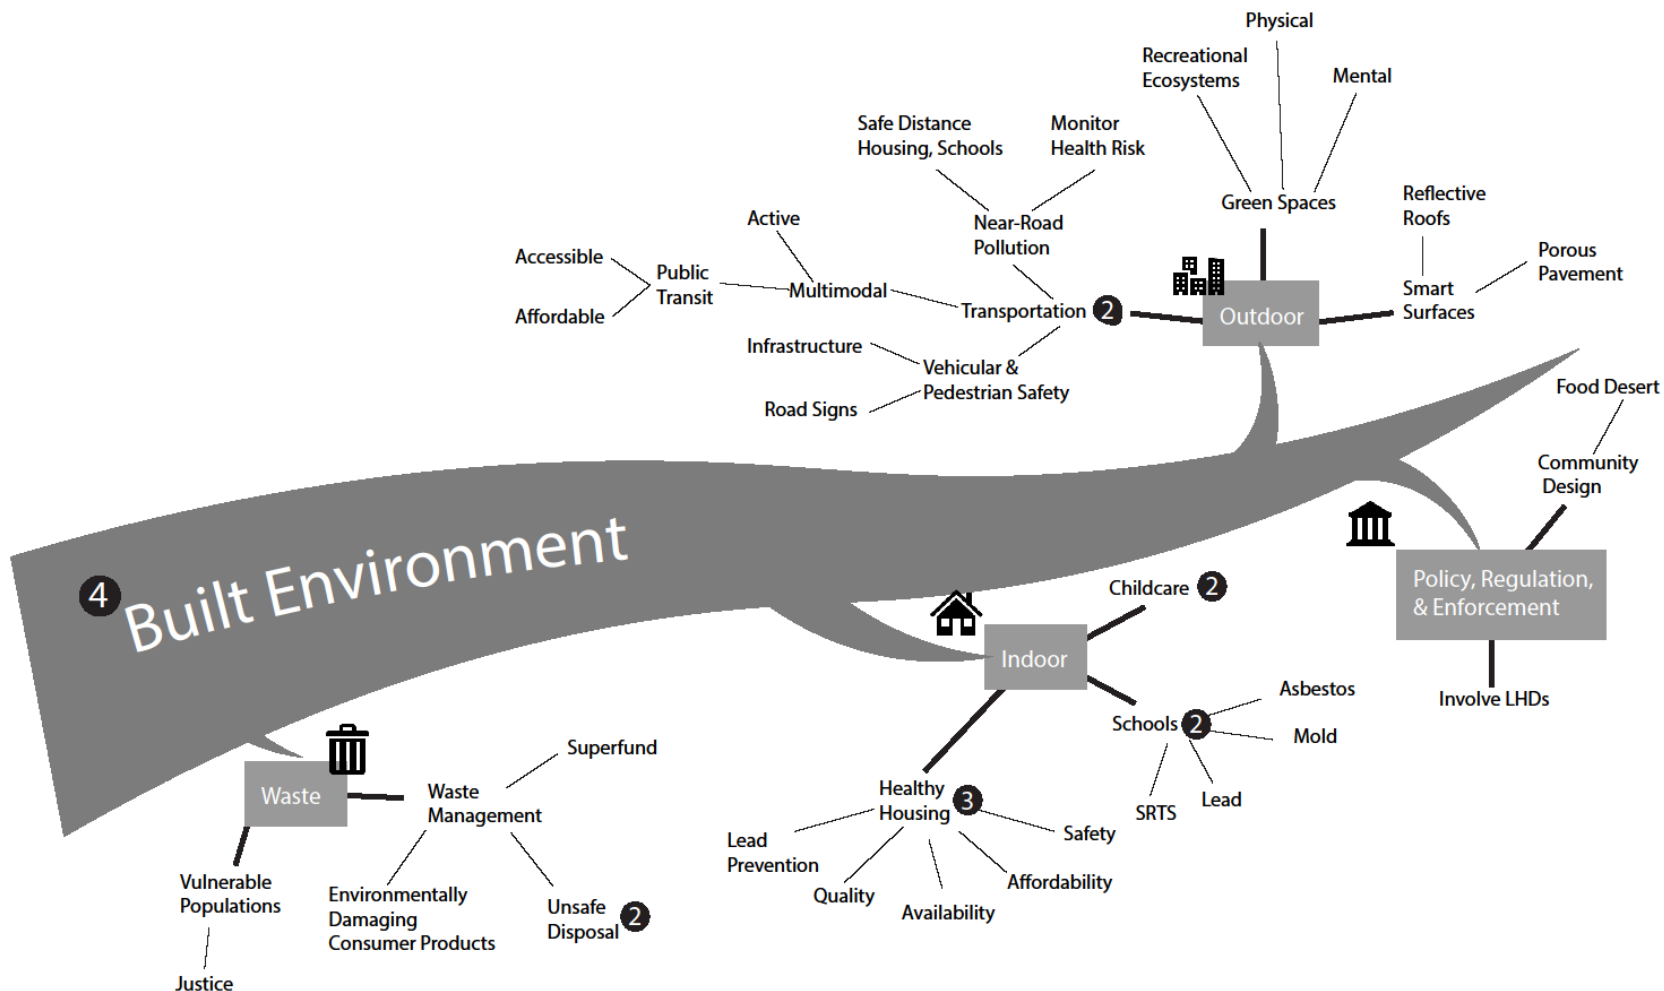

Environmental Justice & Equity

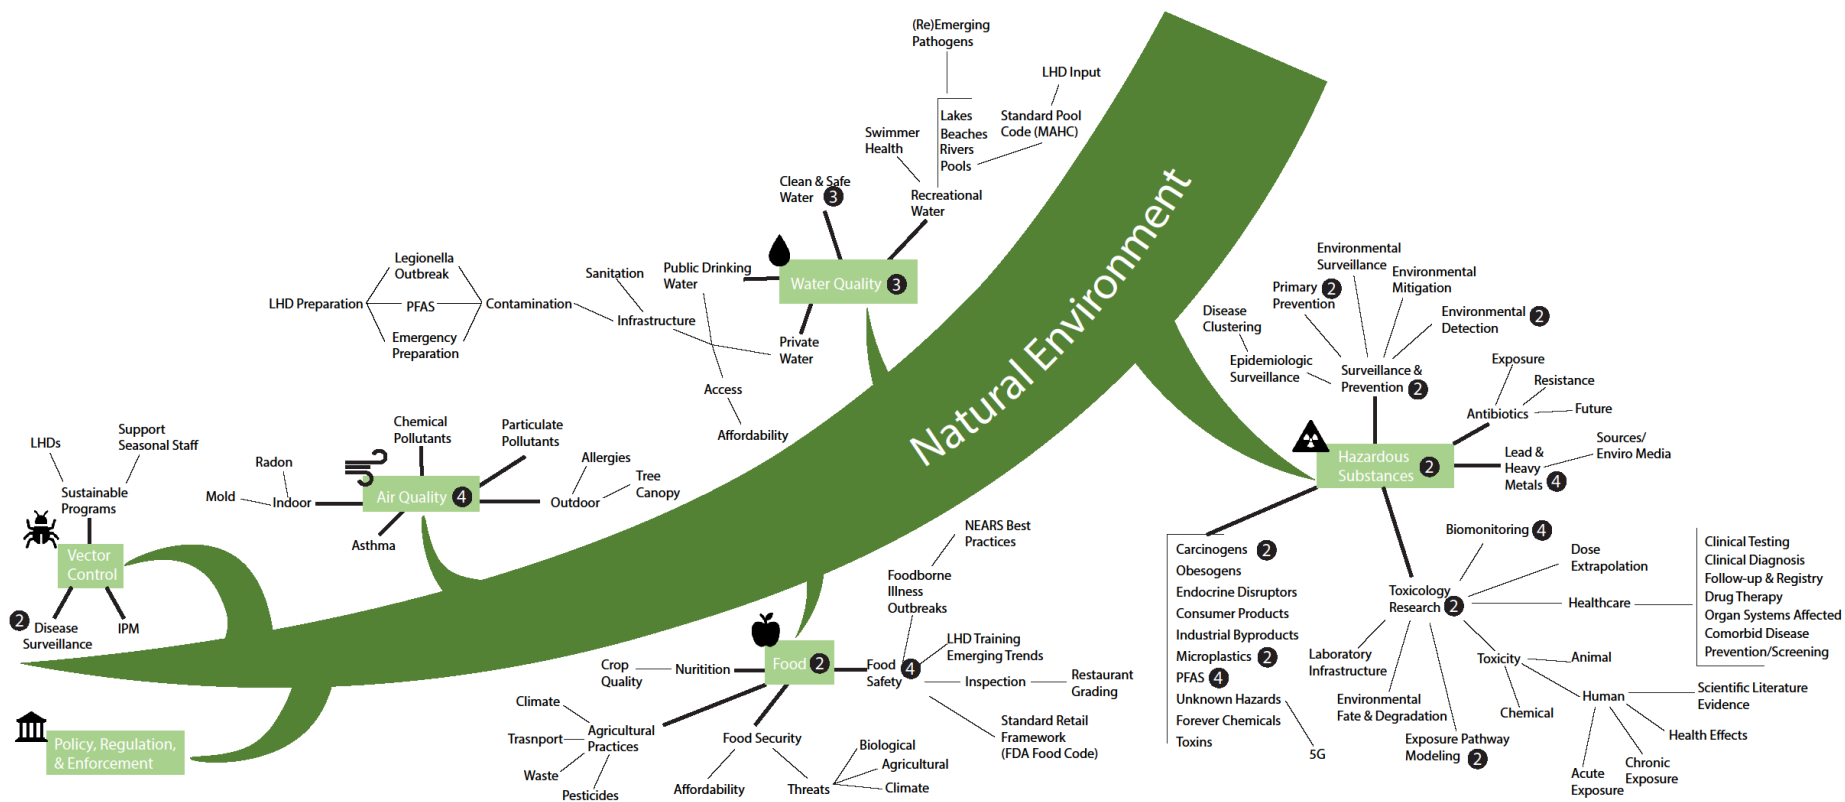

Built Environment

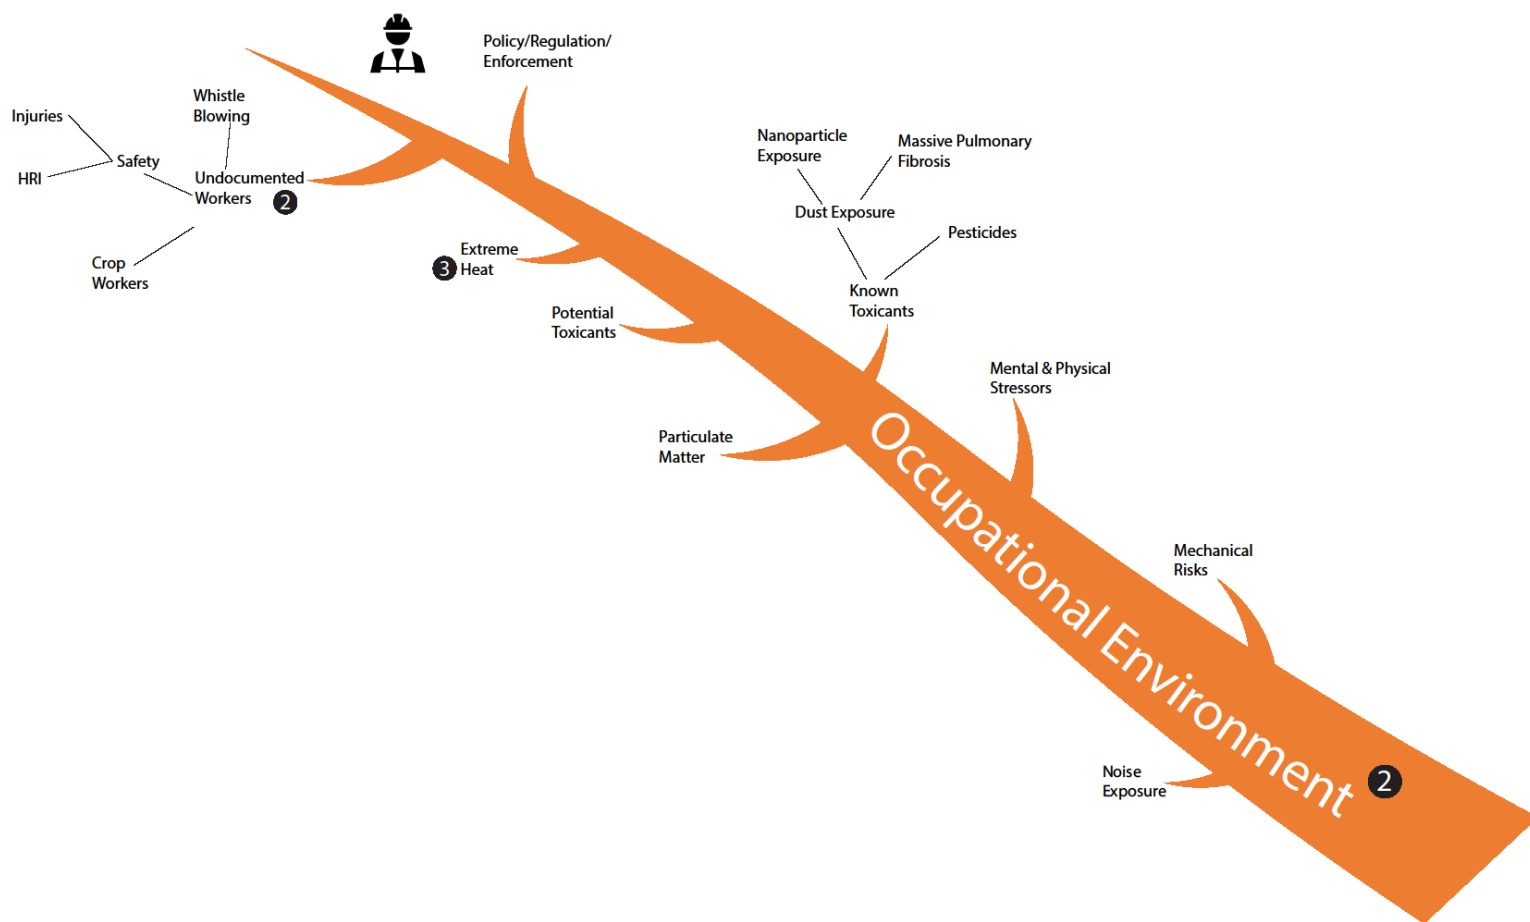

Natural Environment

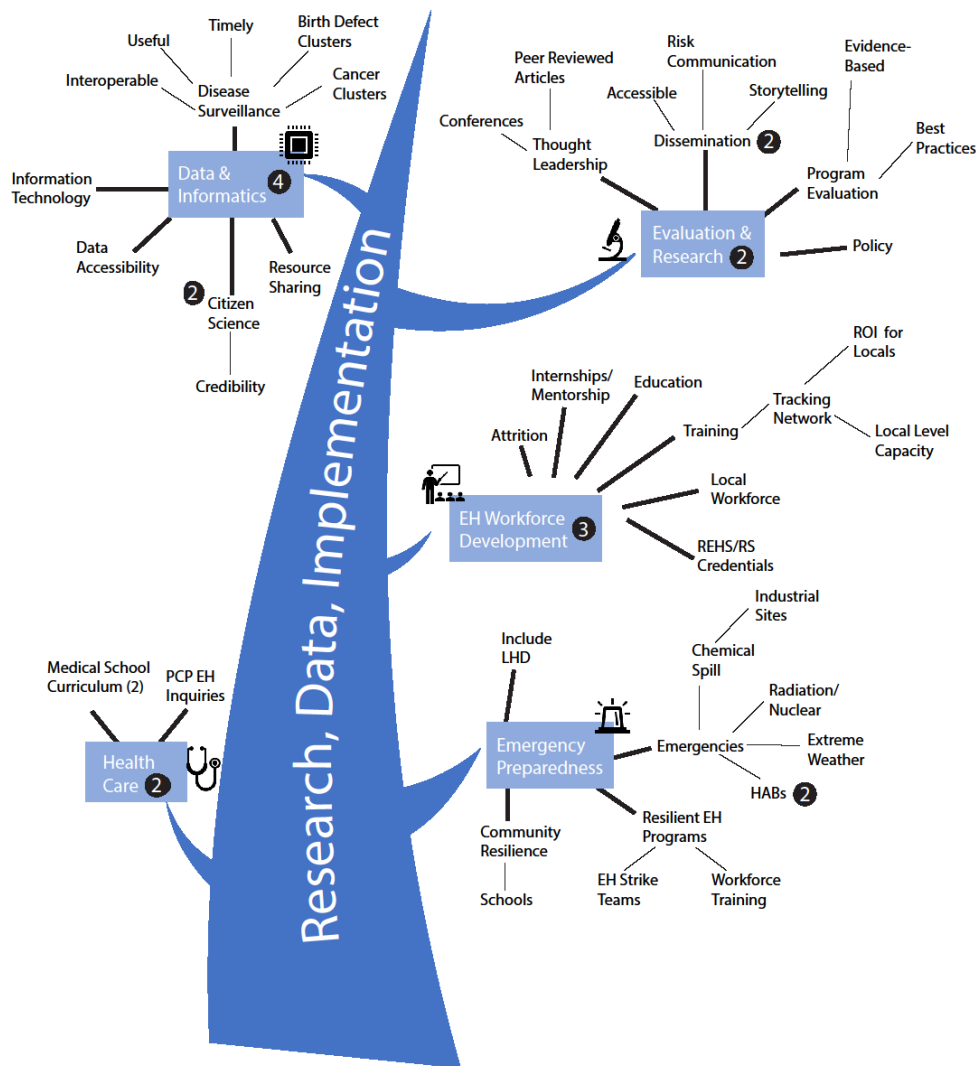

Occupational Environment

Research, Data, Implementation

Questions
