2015: NORMAN Suspect List Exchange was founded

A new member in the NORMAN Database collection...

The screenshot shows the NORMAN website interface. The header includes the NORMAN logo and the tagline "Network of reference laboratories, research centres and related organisations for monitoring of emerging environmental substances". A navigation bar lists various sections: Home, NORMAN Network, Working Groups, Membership, NORMAN Bulletin, Success Stories, Publications, Job opportunities, Contact, and Gallery. A left sidebar contains a "Menu" with links to Emerging Substances, DATABASES (highlighted with a red box), Topics and Activities, Workshops and Events, QA/QC Issues, Glossary, and Useful links. The main content area is titled "Databases" and describes the development of two web-based databases: EMPODAT and NORMAN MassBank. The NORMAN Suspect List Exchange is highlighted with a red box and a red arrow pointing to it from the DATABASES link in the sidebar. Below the database descriptions, the website states the primary aims of the databases and mentions the NORMAN Position Paper.

Databases

NORMAN organises the development and maintenance of two web-based databases for the collection & evaluation of data / information on emerging substances:

- EMPODAT: a database of geo-referenced monitoring / occurrence data on emerging substances;
- NORMAN MassBank: a database of mass spectra of unknown or provisionally identified substances.
- NORMAN Suspect List Exchange**: a central website to access various lists of substances for suspect screening.

These databases are being developed and integrated with the primary aims of:

- Bringing together existing knowledge on emerging substances and,
- Setting up a framework for the systematic collection, elaboration and scientifically sound evaluation of future data.

NORMAN should become the primary data source and global one-stop-shop for all issues regarding emerging substances, contributing to the creation of the early-warning system for emerging pollutants and subsequent policy actions.

The NORMAN Association has a long-term interest in being granted access to data on emerging substances from various research projects and in exploring other areas of possible data sharing in line with the **NORMAN Position Paper: Collection, exchange and interpretation of data on emerging substances - Towards a harmonised approach for collection and interpretation of data on emerging substances in support of European environmental policies.**

Wikipedia

Perfluorooctanesulfonic acid (conjugate base perfluorooctanesulfonate) (PFOS) is an anthropogenic fluorosurfactant and global pollutant. PFOS was the key ingredient in Scotchgard, a fabric protector made by 3M, and numerous stain repellents. It was added to

NormaNEWS: Norman Early Warning System

List Details

Description: The Norman Early Warning System (NormaNEWS) is a pilot network designed to investigate the spatial and temporal distribution of newly identified contaminants of emerging concern in environmental samples through performing retrospective suspect screening on HRMS data acquired using different instrumental platforms and data processing software. The NormaNEWS pilot study was performed through recruiting eight reference laboratories with available archived HRMS data with the goal of exploring the potential of an early warning network to rapidly establish the occurrence of newly-identified contaminants of emerging concern across Europe and beyond, through the use of retrospective suspect screening employing HRMS. The pilot study was referred to as the Norman Early Warning System, abbreviated to NormaNEWS.

Number of Chemicals: 131

NORMANEWS

List Details

Description: The Norman Early Warning System (NormaNEWS: <http://www.norman-network.com/?q=node/244>) is a pilot network designed to investigate the spatial and temporal distribution of newly identified contaminants of emerging concern in environmental samples through performing retrospective suspect screening on HRMS data acquired using different instrumental platforms and data processing software. The NormaNEWS pilot study was performed through recruiting eight reference laboratories with available archived HRMS data with the goal of exploring the potential of an early warning network to rapidly establish the occurrence of newly-identified contaminants of emerging concern across Europe and beyond, through the use of retrospective suspect screening employing HRMS. The pilot study was referred to as the Norman Early Warning System, abbreviated to NormaNEWS.

List Name	Number of Chemicals	List Description
CHEMINV: EPA Chemical Inventory for ToxCast (20170203)	5231	CHEMINV is full list of unique DSSTox substances mapped to historical chemical inventory of physical samples registered by EPA's ToxCast Chemical Contractor (Evotec) since launch of ToxCast program in 2007.
DNT Screening Library	1476	DNTSCREEN is a list of chemicals that is being used in medium- and high-throughput in vitro and zebrafish assays.
EPA Toxcast Screening Library	4736	TOXCAST includes all EPA-provided chemicals for which screening data have been generated in the ToxCast research program since 2007.
Norman Network PFAS (KEMI)	2257	Perfluorinated substances from a Swedish Chemicals Agency Report (provided by Stellan Fischer) on the occurrence and use of highly fluorinated substances.
NORMANews	131	The NORMAN Early Warning System (NormaNEWS) is a collaborative activity run by the NORMAN Network to investigate newly identified contaminants of emerging concern via retrospective screening on HRMS data.
Tox21 Screening Library	8947	TOX21SL is list of unique substances in Tox21 multi-federal agency screening library, contributed by the EPA, National Toxicology Program (NTP), and National Center for Advances in Translational Science (NCATS).

Comments

This is only the beginning ... future challenges:

Huge progress in a short time – but much more to follow

- Mixture identification and curation

- Progressive curation – error detection and removal (early days!)
- Progressive registration of additional substances
 - Contributions of additional lists are welcome!
- Consolidation of the “MS-ready” concept – consistency between resources
- Treatment of UVCBs: **U**nknown or **V**ariable composition, **C**omplex reaction products or **B**iological materials

 Supporting Information

ABSTRACT: An integrated workflow based on liquid chromatography coupled to a quadrupole-time-of-flight mass spectrometer (LC-QTOF-MS) was developed and applied to detect and identify suspect and unknown contaminants in Greek wastewater. Tentative identifications were initially based on mass accuracy, isotopic pattern, plausibility of the chromatographic retention time and MS/MS spectral interpretation (comparison with spectral libraries, in silico fragmentation). Moreover, new specific strategies for the identification of metabolites were applied to obtain extra confidence including the comparison of diurnal and/or weekly concentration trends of the metabolite and parent compounds and the complementary use of HILIC. Thirteen of 284 predicted and literature metabolites of selected pharmaceuticals and nicotine were tentatively identified in influent samples from Athens and seven were finally confirmed with reference standards. Thirty four nontarget compounds were tentatively identified, four were also confirmed. The sulfonated surfactant diglycol ether sulfate was identified along with others in the homologous series ($\text{SO}_4\text{C}_2\text{H}_4(\text{OC}_2\text{H}_4)_x\text{OH}$), rarely investigated pesticides and their transformation products (TPs) in 76 surface water samples. Water-soluble and readily ionizable (electrospray ionization) substances, 185 in total, were selected from a list of all insecticides and fungicides registered in Switzerland and their major TPs. Initially, a solid phase extraction-LC-HRMS method was established using 45 known, persistent, and high sales volume pesticides. Seventy percent of these target substances had limit of
