Office of Research and Development

The National Wetland Condition Assessment

Mary E. Kentula
USEPA, ORD, NHEERL-WED, Corvallis, OR

2016 National Mitigation and Ecosystem Banking Conference
May 10-13, 2016, Fort Worth, TX

The views expressed in this presentation are those of the author and do not necessarily represent the views or policies of the U.S. Environmental Protection Agency

NWCA Objectives:

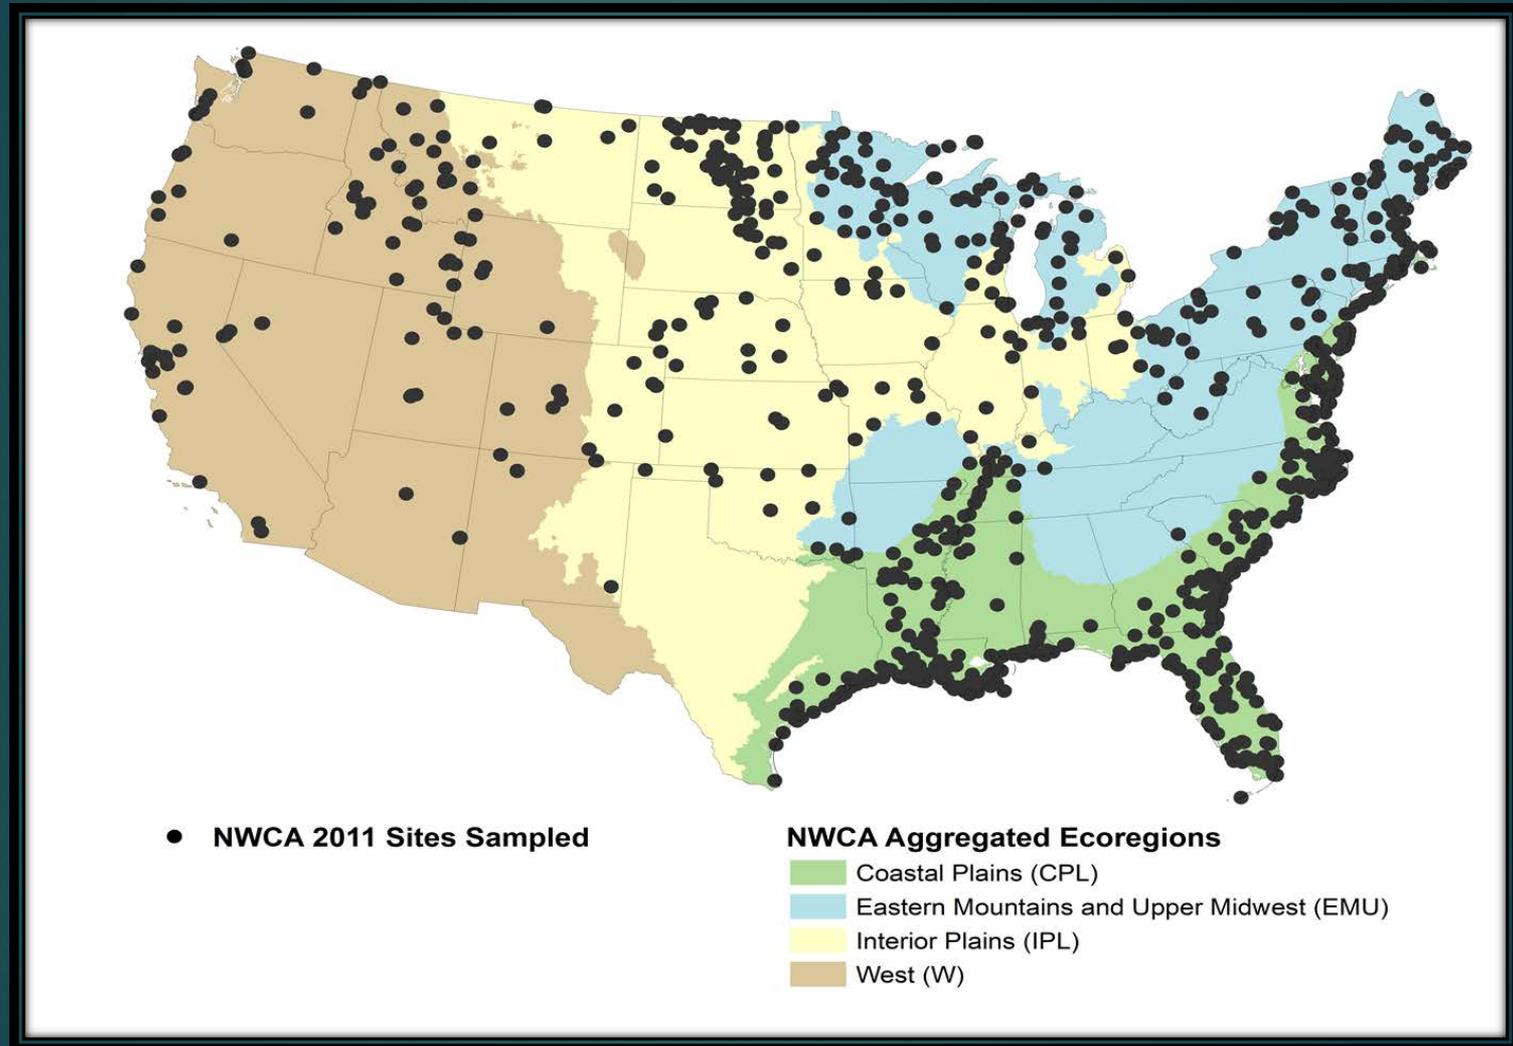

- ▶ Produce a national report describing the ecological condition of the Nation's wetlands and stressors commonly associated with poor condition;
- ▶ Collaborate with states and tribes in developing complementary monitoring tools, analytical approaches, and data management technology to aid wetland protection and restoration; and
- ▶ Advance the science of wetland monitoring and assessment to support management needs.

The NWCA sampled:

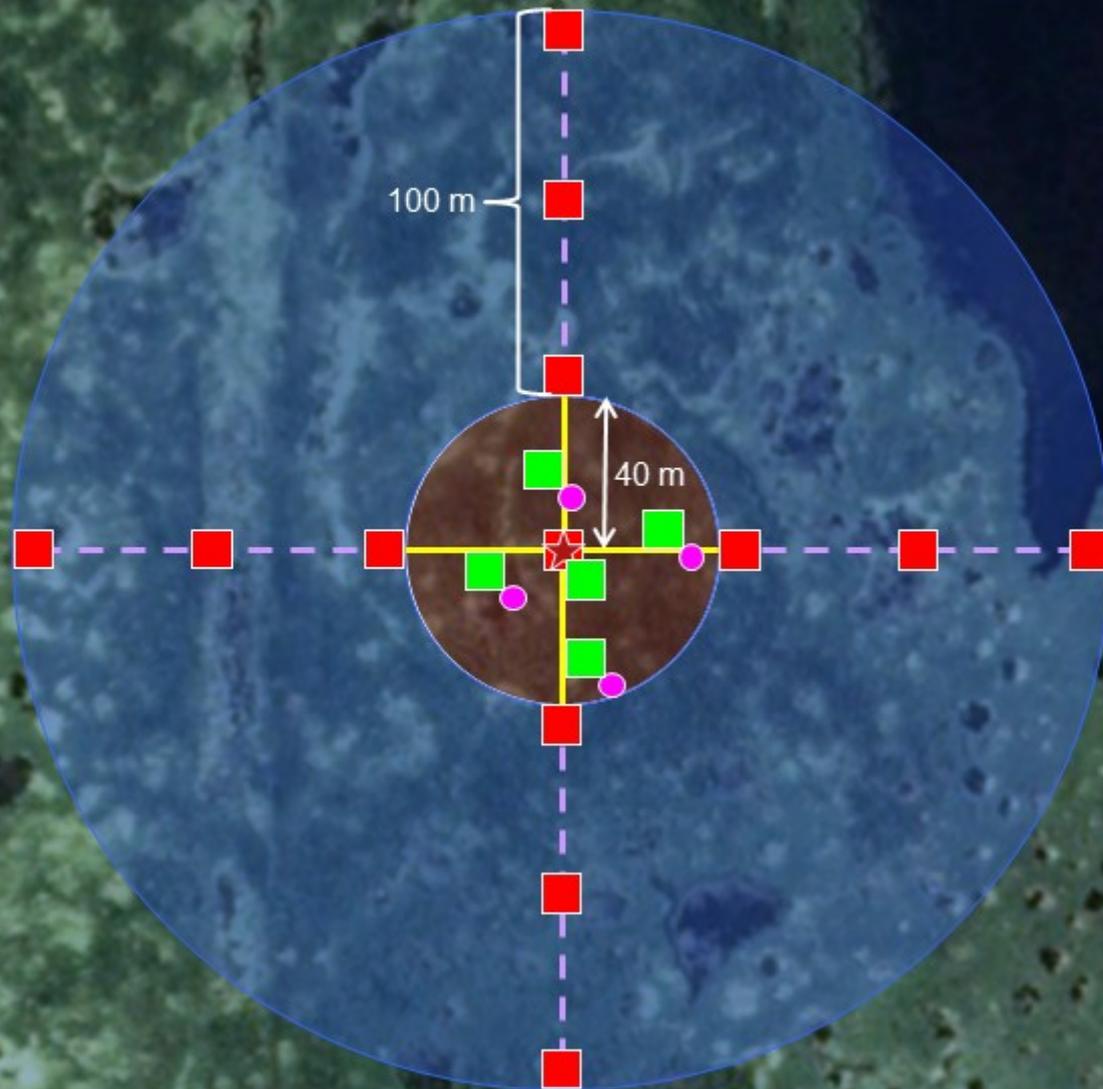

Tidal and nontidal wetlands of the conterminous U.S., including farmed wetlands not in crop production at the time of sampling

The wetland sites had rooted vegetation and, when present, open water less than 1 meter deep

Map of sites sampled, NWCA 2011 survey

NWCA Standard AA and Buffer

- Assessment Area
- Vegetation Plot
- Soil Pit
- Buffer Area
- Buffer Plot

Categories of Data Collected:

- ▶ Vegetation
- ▶ Soils
- ▶ Hydrology
- ▶ Water Chemistry
- ▶ Algae
- ▶ Stressors in AA and Buffer
- ▶ Buffer Characterization
- ▶ USA-RAM

Applications to
Mitigation Banking
and Restoration

Ecological Condition of Resource

Stressor Extant: nonnative plants (NPSI)

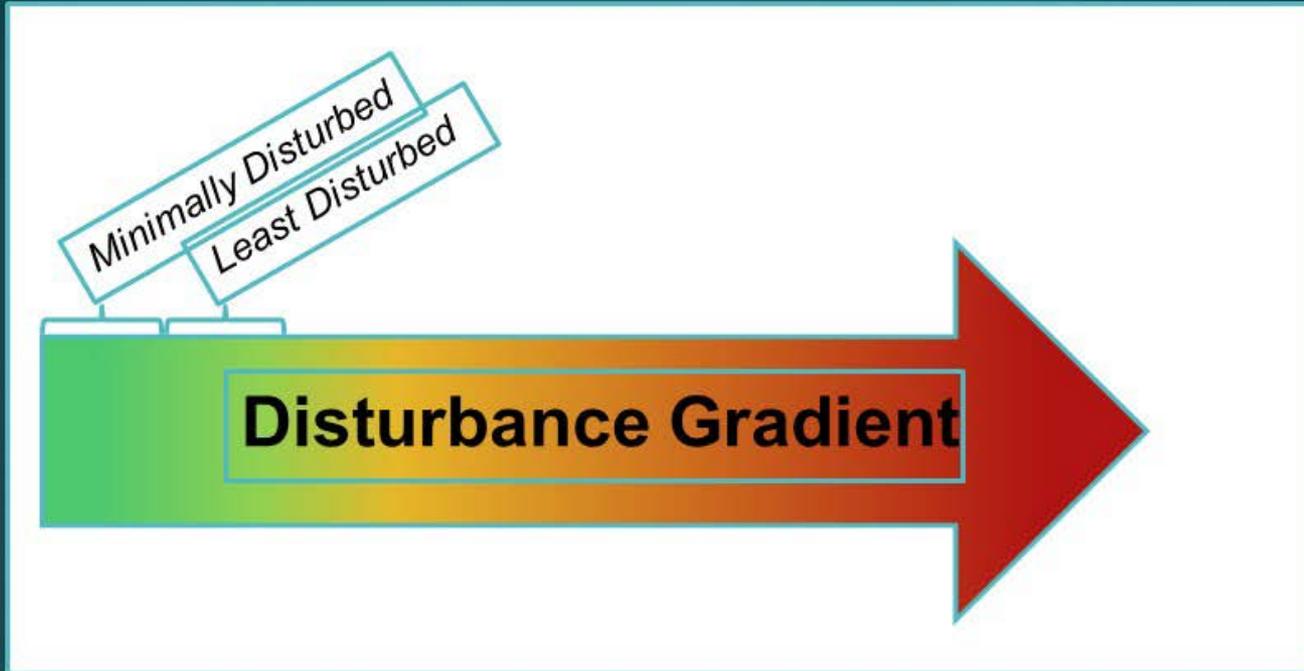

Presentation Overview

2011 NWCA Results

Applications to
Mitigation Banking
and Restoration

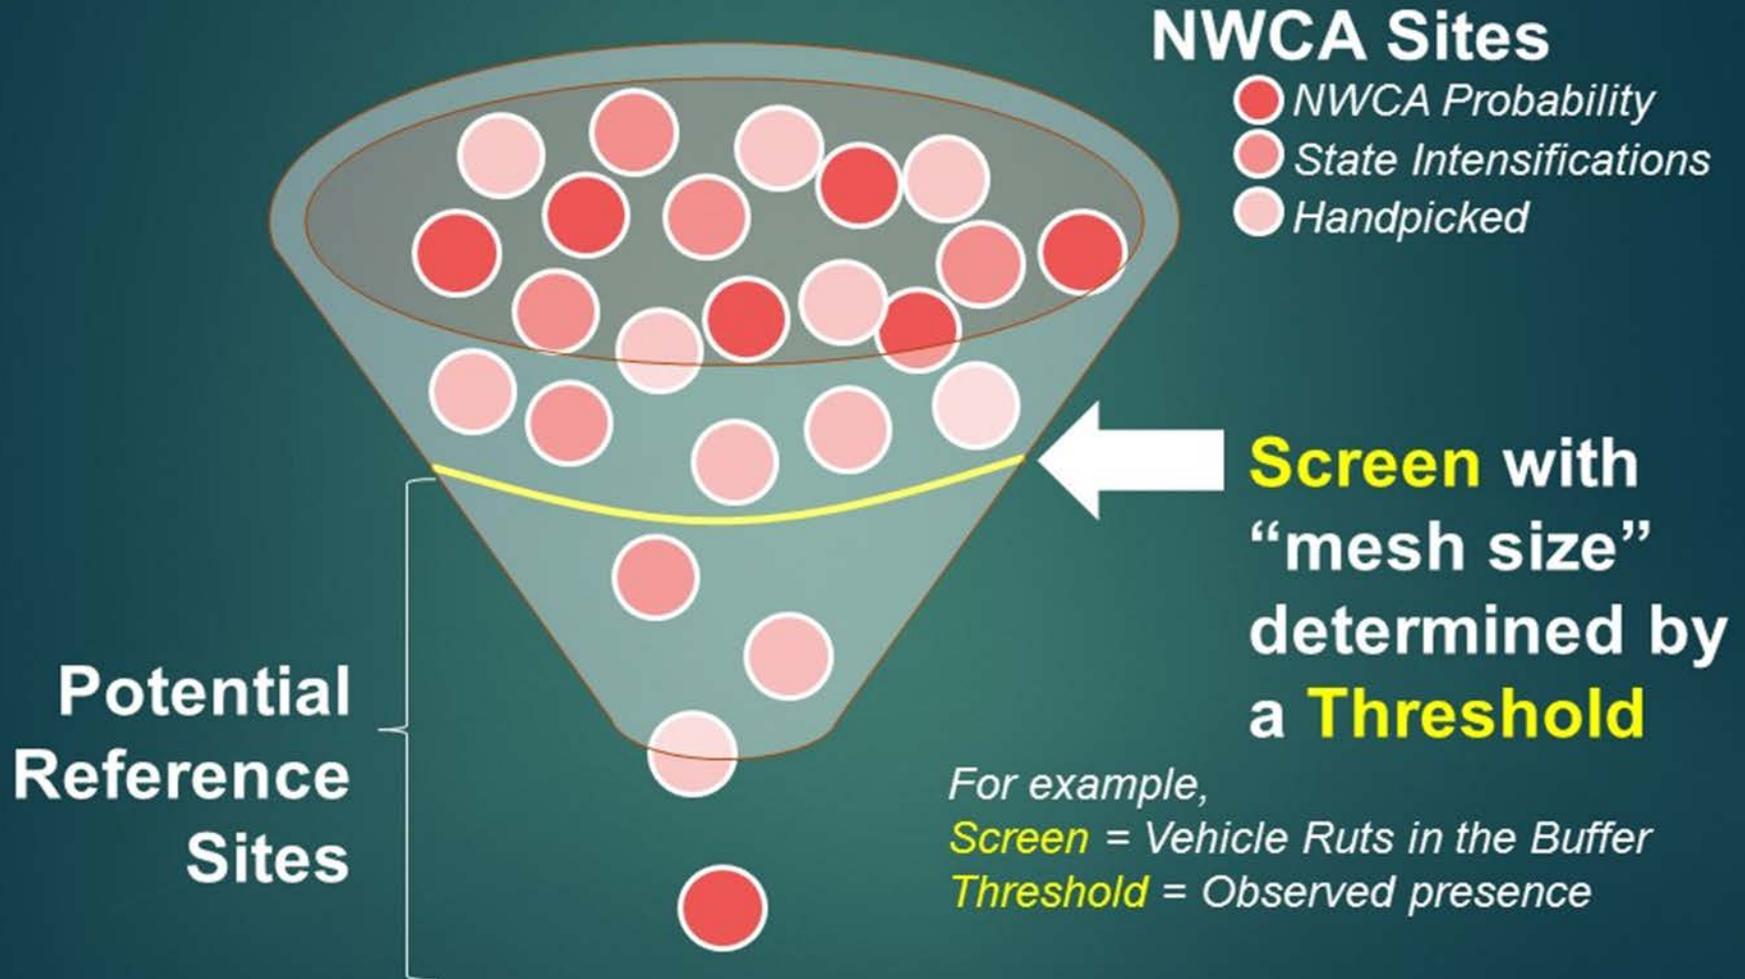

Disturbance Gradient

- ▶ Following Stoddard et al. (2006) definitions of reference:
 - ▷ Minimally Disturbed sites have no evidence of significant human disturbance
 - ▷ Least Disturbed sites represent the best available conditions given the current state of the landscape

The Screening Approach

Relationship Between Stressors and Biological Condition

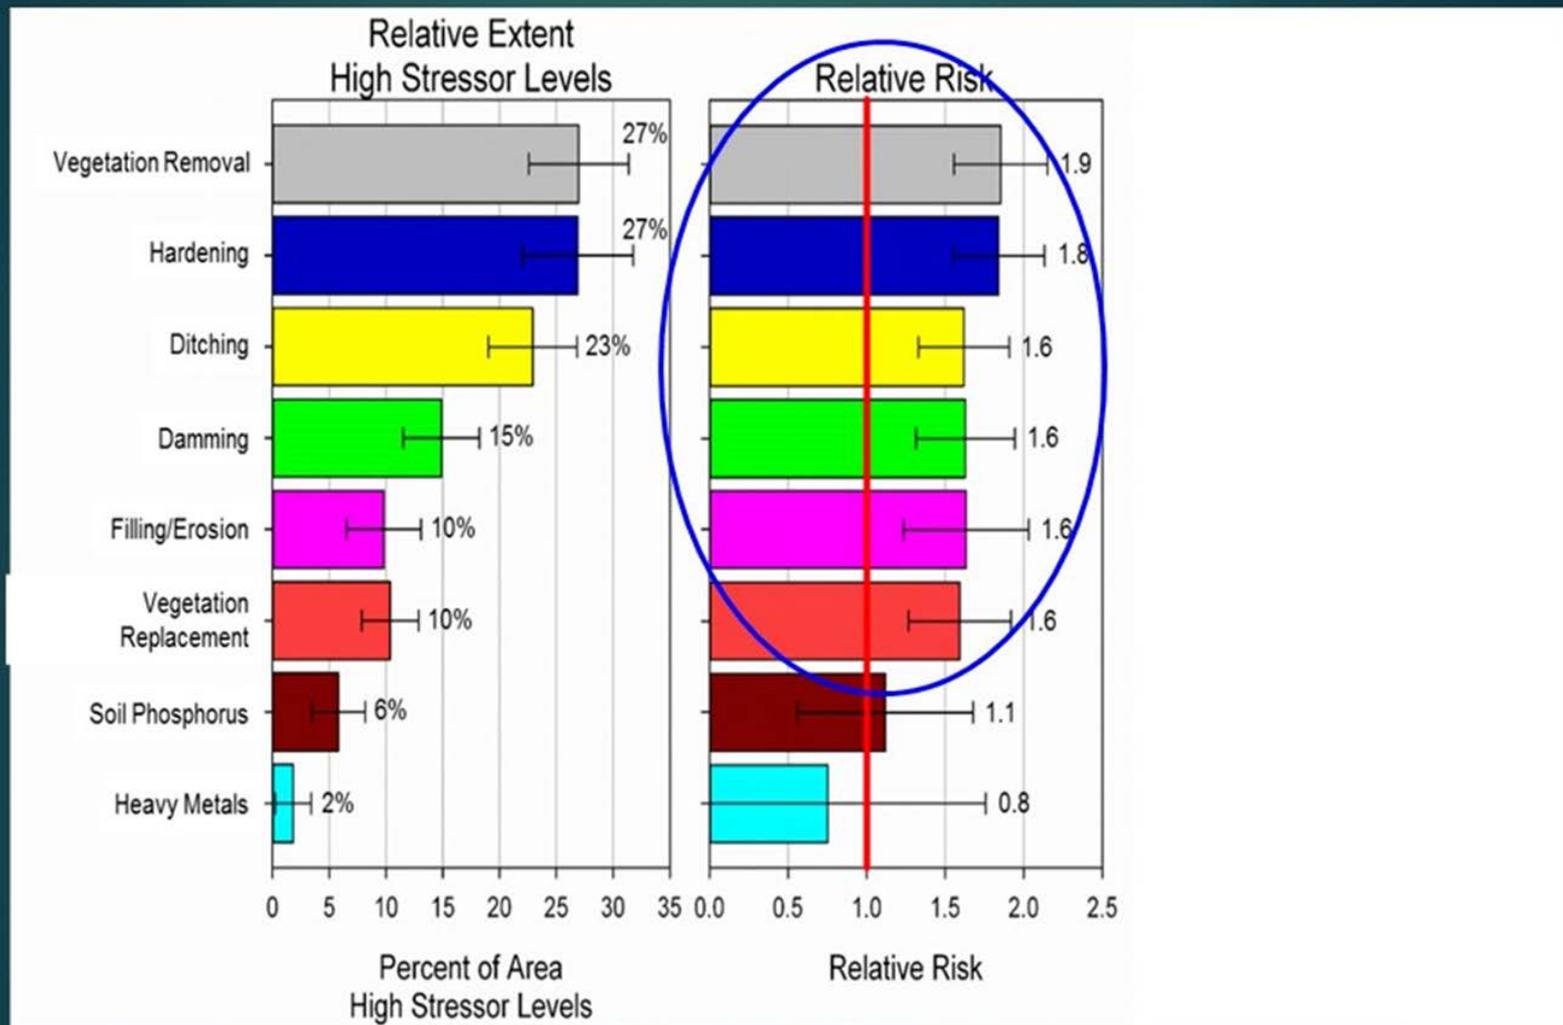

- Relative Extent of Stressors
- Relative Risk
- Attributable Risk

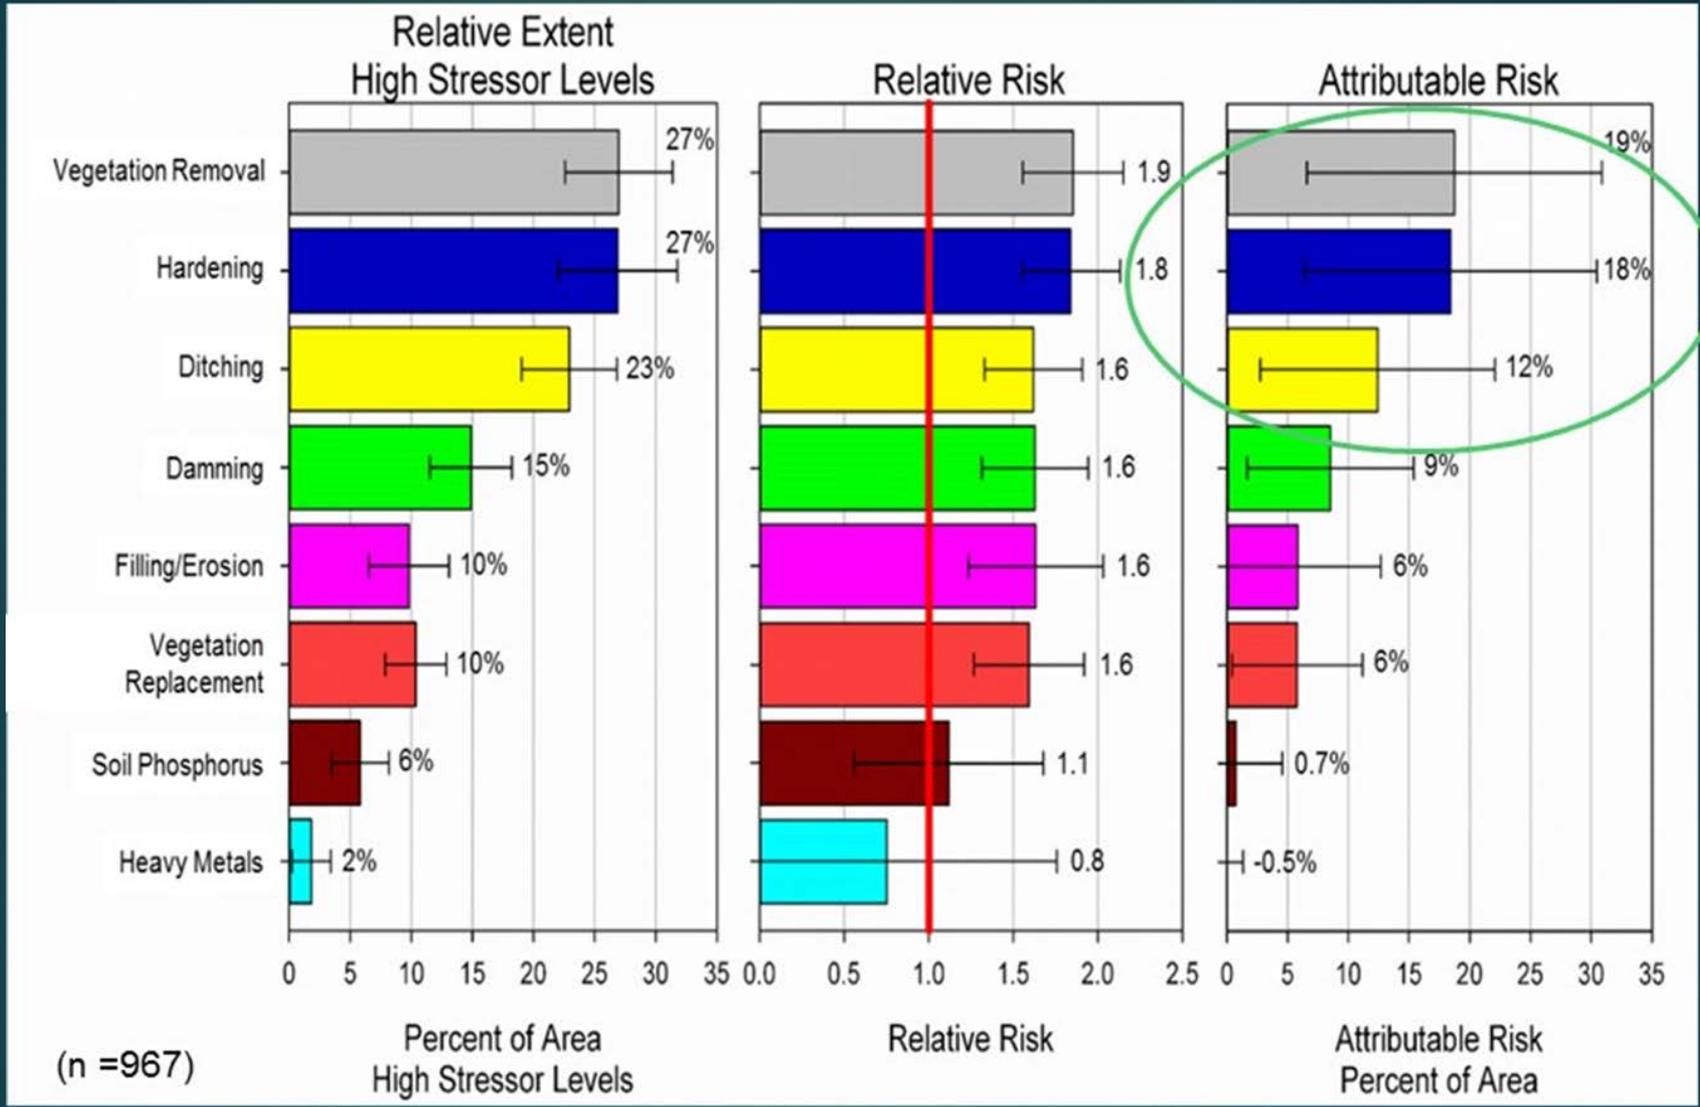

Relationship between stressors, condition

Relationship between stressors and condition; relative risk

Relationship between stressors, condition

2011 NWCA results can be used in mitigation banking and restoration:

- For a quantitative definition and benchmark of least disturbed condition (reference)
- As a context for evaluating restoration outcomes
- To prioritize development of restoration designs that address effects of stressors closely tied to poor condition

How YOU can participate:

- Provide input on information gaps NWCA might address
- Participate in the NWCA by allowing access if a site of yours is selected for sampling; provide information on its history
- Contact Mary Kentula (kentula.mary@epa.gov) or Palmer Hough (hough.palmer@epa.gov) with input or questions
